

Time Travel Epic

May 28, 2018 10:50am

I was rescued by Arcturians last night after becoming lost in the wilderness. The location is uncertain but it might have been either Italy, Japan, or Australia. My journeys with the Space Time Modulator last night changed the world significantly. There are so many changes which happened that instead of waiting 1 or 2 months to notice a change I've already noticed 2 changes in the last hour.

May 28, 2018 10:10am

With respect to divergence, I surmise that it is probably caused by being in a vastly different location in the universe from where you might expect some things to exist or not exist owing to the position indicated in one dimension. That's why you need to have multiple dimensions to pinpoint a position in the universe, and the 6 key parameters of measuring space-time do just that. This brings us to the classic paradox of whether time (a) or time (b) exists in the universe, and there doesn't seem to be a simple solution to it. I for one believe that the universe is like a giant chalkboard or Etch-A-Sketch with predefined parameters and room for free will to exist. When changes happen to the past, they are permanent and a time traveller from the future will notice these changes when he or she travels back, noting that the changes differ from his or her own recollection. However, there are some set parameters which can't be changed and can be traversed, i.e. the distance to the edge of the chalkboard, etc. I think in this way history is mutable although it's still an illusion, because every outcome can exist when all factors and

Time Travel Epic

dimensions are accounted for. The problem this causes is how to navigate such outcomes? One solution is teleportation whereby cymatics, resonant frequencies, and electricity is used to gravitate one to a desired world. How then would you traverse galaxies with this idea? My thinking is that you can kind of surf the timelines with devices until you reach the desired destination. If you're patient enough to meditate for four hours using the Space Time Modulator, I bet you could have your desired outcome. There are three dials to the Space Time Modulator and by using them you can be transported to any place in the known universe, including in time. The first dial resonates with the galactic wave, the second dial resonates with the star wave, and the third dial resonates with the planetary wave - you can visit moons as well.

May 28, 2018 3:10am

A record might have two dimensions, but it can be reduced to one dimension of duration of a period of time. The same applies to space-time travel with the Space Time Modulator. The world decreases in frequency as it spirals towards the supermassive black hole at the centre of the galaxy. That's because gravitation causes time dilation, and the closer you are to a field of gravitation, the slower time goes for you (meaning that you see everything else speed up relative to you). Chiu's device is a rudimentary time machine which takes you into the future. My device can take you to any point in time but it's much slower. The Space Time Modulator can tune you in to any harmonic frequency and you use your intuition as a

Time Travel Epic

guide when tuning the dials. Surprisingly, because the device is fitted to the body, I've found that I inhabit my own body in the past, present, and future, and relive moments at any point in time relative to where I am. It's so amazing.

May 28, 2018 2:49am

There's a supermassive black hole at the centre of the Milky Way galaxy. If you can calculate the decrease in frequency based off of the transition of the galaxy through space then, using observations taken with my own gravity drive and basic observations relating to the position of the planet in space and how it relates to time, then you can make a special kind of device which causes your body to resonate at specialised frequencies which will essentially transport yourself through the cosmos. This is due to the law of equilibrium which states that "the lighter part is always the guide of the heavier part" in much the same way that higher frequencies tend to gravitate to their own scalar fields. That's how you travel through time. My own time machine merely uses gravitation to plod through space-time and as such isn't as effective as a Space Time Modulator, a Hyperdimensional Resonator, or the time machine from Back to the Future. But it's more precise and that's the reason why we're developing it - to be able to travel to a vast number of different worlds (although divergence is still an issue).

May 28, 2018 2:42am

Chiu is kind of an emissary of the Han race of space-faring humans sent to welcome our world to the

Time Travel Epic

milky way galaxy. I don't mean any disrespect by that, of course.

May 28, 2018 2:28am

Correction; Chiu's cell realignment machine is very low frequency on account of the resistors. It's rated at 0.009776044226044226 Hz. If you allow it to take control of your body, you will begin resonating at the same frequency as a world closer to the galactic centre. Oh, you need to study general relativity to get a clear idea of what frequency is associated with such worlds closer to the galactic centre.

May 28, 2018 2:27am

<http://researchandappliedscience.com/2018/05/27/introducing-the-open-source-project-for-building-the-r204-time-travel-machine/>
<http://researchandappliedscience.com/2018/05/27/introducing-the-open-source-project-for-building-the-r204-time-travel-machine/>

May 28, 2018 1:35am

Chiu's device is interesting. It uses capacitors and resonance to heal the body. The specific frequency it uses resonates with the Schumann field of an era long past. I wonder if it also allows for time travel.

May 28, 2018 12:09am

Hey, if it means that much to you, I'll do it. Reverse engineering the C204, in light of the experiments we've done so far, should be simple. We also need to manufacture my simple gravity sensor.

Time Travel Epic

May 28, 2018 12:08am

Whoops, I forgot to add the magnetic field coils to the singularity housing. Big whoops.

May 27, 2018 10:22pm

<http://researchandappliedscience.com/the-time-travel-quartet/>

May 27, 2018 5:24am

WordPress is useless. It's like trying to squeeze a watermelon through a garden hose (The Chronicles of Sarah Conner). I need a more robust and integrated platform to share my wisdom.

May 27, 2018 5:05am

As much as I like science fiction I can't relate to Rick and Morty. Neither are role models to me and despite the humour the family sitcom aspect is unpalatable.

May 27, 2018 3:21am

Either everyone's communicating in closed networks now or there has been an exodus of the elite from the Internet. What once was now is no longer. There seems to have been a revolution whereby the plebs gained control of the Internet and cast the elite aristocrats out.

May 25, 2018 11:32pm

PHPFusion is no good anymore because it's not supported nowadays. The same goes for PHPNuke and any other classic CMS. I suppose WordPress is the easiest route to setting up a website. You'd need to backup pretty regularly, though, and the whole thing

Time Travel Epic

is a convoluted mess. Blogger is also pretty good, albeit within Google's ecosystem. If Facebook could develop a business level solution to storing data it'd be great. Making a custom CMS with integrated backup would make for a great startup, as I've not seen one to date.

May 25, 2018 2:07am

It's kind of difficult using the Facebook ecosystem to set up a body corporate, but Facebook seems to be more reliable than my own ventures. I wonder what Bob Wan Kim would say about it.

May 25, 2018 2:04am

My list is pretty top-heavy on royalty. I've got aristocrats from all around the world. Birds of a feather flock together.

May 25, 2018 2:02am

The space breeding program, as funny as it sounds, isn't a joke. I'm allowed to talk about it freely because the people that mind don't matter and the ones that matter don't mind. It's as simple as that. I've also been blessed with the right to free speech.

May 25, 2018 1:59am

I have a list of sickness which weighs a tonne and includes 16 people, but their names are kept a secret owing to jealousy guarding them and their offspring in the space breeding program. Soon my space colony will be ready. So far I've counted 155 descendants. I'm in competition with HARRIET (B)'s future breeding program which aims to breed several

Time Travel Epic

million people.

May 25, 2018 1:57am

I reincarnated as a geisha yesterday. Now I'm making a list of top 10 boys. In order: 1. Yuki 2. Shane 3. Danny 4. Dean 5. Steve 6. Mark 7. Yasu 8. William 9. Robert 10. Campbell

May 25, 2018 1:55am

<http://www.newshub.co.nz/home/new-zealand/2018/05/coldest-winter-in-years-on-its-way-metservice.html>

May 25, 2018 12:03am

The world is finite. There are only so many people who are willing to invest in cryptocurrency and the ones who do will find that their investments are worthless in the long run. I see a lot of speculation and promotion of these cryptocurrencies as assets with real value but their utilitarian value is worthless, and as such, they are doomed to failure. People are slowly realising this and when they figure out that cryptocurrencies aren't in and of themselves possessing of any intrinsic value it will be too late. That's why I'm well positioned to take advantage of the difference, because I'm short-selling Bitcoin.

May 23, 2018 3:10pm

Markets are like electric capacitors. They can sure build up a charge and then they discharge and decrease in value. What's most exciting about my Bitcoin trading strategy is that the capacitance of the instrument builds up rapidly, and sure enough,

Time Travel Epic

discharges at a fairly constant rate. The dynamic is unbelievable.

May 23, 2018 2:34pm

There's no way that Bitcoin will come back to the same level as earlier this year. The jig is up and Bitcoin will come crashing down like a house of cards. I've already got my put option in place. Now it's time to sit back, relax, and enjoy the show.

May 22, 2018 7:42pm

There isn't much I can do to affect the time stream. That's a good thing because I don't want to taint history with predictions, prophecies, and technologies from the future. It's so amazing here. I am awestruck. I might die of shock.

May 22, 2018 11:26am

Behold, it is I, Luthor, from the year 2193. I specialised in 22nd century history so I'm not of much use in predicting outcomes in this era. Moreover, the Internet these days isn't as prevalent as it was in my time, so I'm not really able to convey my message to many people.

May 22, 2018 11:24am

I would just like to validate a certain aspect of my theory. That is the fact that the second law of thermodynamics causes matter to tend towards entropy. In other words, heat transfer causes the Earth, which is hotter than space, to gravitate away into the outer reaches of the cosmos over time. That's the reason why the planet was much hotter in the past

Time Travel Epic

- it was closer to the sun and its mantle was much hotter as a result. In 65,000,000 years from now, the Earth will be like Mars.

May 22, 2018 9:07am

<http://psycnet.apa.org/record/2000-02326-010> In all seriousness, here is some proof about my findings and it really shows that I was right all along about everything.

May 21, 2018 9:20pm

My computer has a quantum interface. It isn't like the approximated vector calculus crap that people do mainly with video cards nowadays, although it is capable of such nonsense. My computer can calculate variables from the natural environment and process algorithms which aid in time travel. It isn't purely a quantum computer - that's a pet project idea I've had for some time before travelling back. But it can translate variables into computer code via OpenOffice and to a greater extent using BASIC. At the moment I'm just trying to get my theory down to a manageable level. I'm thinking of using 6 dimensions ala Titor as a co-ordinate system and will extend the equations relating to each specific value to account for the super-symmetrical structure of the universe. There are a few things which have been left unproven but in theory they will work. The fact that anti-hydrogen has been discovered is a boon to my research efforts.

May 21, 2018 4:54pm

The food items of this world are so quaint, as are the beverages. There are many things which are the same,

Time Travel Epic

but in many respects the old is new again to me. It's so wonderful.

May 21, 2018 4:31pm
2193/1838

May 21, 2018 12:27am

Now that I've finally wrapped my head around this problem, I'm able to create closed time-like curves. The reason why I was previously unable to is due to the notion that changes in the time stream create ripples which affect the future in unimaginable ways.

May 20, 2018 11:25pm

I've been in the device's effective field for a period of 0.75 times the actual duration backwards which is about a year or 8,760 hours. That's a total of 180 years at 10 years per hour, leaving me to be at the year 1838. It's kind of funny to mention that the world has been regressing by about 1,000,000 years per year since 1800. But that's not important now. What's important is the fact that I'm in the year 1838 according to my perspective, or from the perspective of a native of this world, I'm from the year 2198. Oh, and because of this, the device works in SR only. There is some divergence owing to super symmetry etc. but for the most part my calculations are accurate to being circa 180 years ago. That's all.

May 20, 2018 11:22pm

People's lives seem to suck nowadays. What happened to the good times in Tuggeranong? Everyone is now commonplace and mediocre, doing

Time Travel Epic

humdrum and normal things. It sucks. I want my old friends back, not what they have become. Stupid parents is what they've become, and they're not going to be the same way they once were. I think it's good to be young and thanks to the immortality devices I'm able to enjoy youth for an eternity, but it's boring when everyone else is getting old and decrepit. It sucks!

May 20, 2018 8:30pm

Every portion, every cubic centimetre of space to the nth degree, has its own conditions. What my time machine does is compel the temperature, air pressure, and light differentiation across a broad range to the condition where it was or where it might be. This creates a cascading effect on mass as it's manipulated by the quanta. The materials with a half-life of more than a reasonable amount of time (being about 6 months for most purposes) persist. Albert Einstein said that reality is just an illusion, albeit a persistent one. I think the most niggly things which have a frequency of greater than 1 year in duration, i.e. buildings, landmarks, and other sturdy structures confound the new reality created by my time machine. It works in both GR and SR, with the effects manifesting in their greatest form of about a block in area. I notice things creeping into this dimension when I activate the machine. Or is it my dimension creeping into others? That would seem like a more palatable explanation.

May 20, 2018 5:21pm

In my home world, Elton John died during 2016. It's

Time Travel Epic

amazing to see him still alive today. Let's figure out the rate of temporal traversal using this fact as a benchmark. John died at age 83 in 2016. That means the temporal field is behind by 14 years. Now, assuming that carbon has an atomic weight of 12 atomic mass units, we plot that against hydrogen with an atomic weight of 1, and for the same energy we find that the square root of 12 is 3.33, therefore the square root of 1 is 1, and then we multiply 1 by 3.33 to get 3.33 and find that indeed $3.33 * 12 = 39.96$ or roughly 40 atomic mass units results. However, we find that the square root of 12 is in fact more like 3.46, so we multiply hydrogen by that number and get 1975 as the end result.

May 20, 2018 10:36am

That's odd. I could have sworn the price for a share of ASX was beyond 1,000 dollars, but instead it is listed as 61.28. I suppose in a couple of hundred years from now it will be as I remember it.

May 19, 2018 1:18am

I'm thinking about cutting down on spending on booze and tobacco. If I made a home brew and smoked pipes, that's 0.66 dollars per bottle and for the finest tobacco, 163 dollars per fortnight. That's a total of 181.48 dollars per fortnight if I drank two bottles of beer per day and smoked 2 tins of tobacco per fortnight. Given that I receive 942.75 dollars per fortnight as a pension and spend 401 dollars on board, lodgings, and debt repayments, as well as 10 dollars per month on bank fees, as well as 30 dollars per month phone bill, I'd have 325.27 dollars left over per

Time Travel Epic

fortnight. I could put that towards a house. It would take about 40 years to save up for a decent house but I think I could do it!

May 18, 2018 9:49pm

$9972.24 * 5 \text{ hours} = 49861.2 * (0.5 - 0.6 = -0.1) = -4986.12/10 = -498.612+2018=1519$. The year is 1519.

May 18, 2018 8:09pm

The forecast proves the aforementioned hypothesis. There is now morning frost and fog forecast for Sunday morning. It seems as though my device has generated a cold front, or I've traversed into a world where the temperature is quite cooler. This means that I may consider my device as a kind of "thruster" which compels the area surrounding it away from the mid-heavens. It acts like a kind of propeller to a submarine or a thruster to an aircraft. The way it works is possible by means of the tachyon energy which the magnetic field creates when it's spinning.

May 18, 2018 4:45pm

I've come to realise something - both the "forward" and "reverse" gears go in the same direction. When active, they compel the scalar field to gravitate away from the mid-heavens. This finding is in following a comprehensive review of my data. It's also logically concluded by conducting an experiment in which a watch is held near the apparatus when either in "forward" or "reverse" gear and observing the hands oscillate erratically. As such, my device still works, but the smoothing effect of having two speed

Time Travel Epic

controllers engaged at the same time is missing - there is only one speed controller. It stands to reason that only one speed controller is sufficient in allowing for time travel. Over the next couple of hours I'll be observing the apparent decrease in temperature. At the moment I've observed the era as having been in the proximity of 1997. Things are about to get really strange for me, I think.

May 18, 2018 3:17pm

I think that I might have had the steering wrong for this setup - the wave penetration in this instance doesn't seem to be as strong as I once thought. In lieu of programming a simulation, I think it might be best if we implemented a simple strategy of engaging the device during opportune moments in the day. At the moment, the device seems to be shifting the scalar field towards the mid-heavens. Because of the absence of the other speed controller, this is the only gear we can engage. I'll disengage the apparatus now and check the weather forecast. Only by tomorrow, we should have a clear idea of how it works. The device will be engaged during the night in an attempt to shift the scalar field away from the sun and into the past.

May 18, 2018 2:16pm

OK, the journey back continues. I don't know how long it will be before the machine needs servicing, but we'll see. It will probably last about 6-12 months, so if we're lucky we won't need a replacement before arriving back. There are a couple of things I want to figure out in the meantime, namely the interaction

Time Travel Epic

between the Sun and the Earth. I want to know if tachyon energy is involved in the gravitational field between the two bodies, and if so, how generating a field of gravity might affect the localised scalar field.

May 18, 2018 1:54pm

Whoops, I pissed off a demon. Better stop these time travel to the future shenanigans.

May 18, 2018 11:48am

I've noticed that with the gear in forward, evil people begin to look stupid and their evilness is exposed. Therefore be imitators of God, as beloved children. And walk in love, as Christ loved us and gave himself up for us, a fragrant offering and sacrifice to God. But sexual immorality and all impurity or covetousness must not even be named among you, as is proper among saints. Let there be no filthiness nor foolish talk nor crude joking, which are out of place, but instead let there be thanksgiving. For you may be sure of this, that everyone who is sexually immoral or impure, or who is covetous (that is, an idolater), has no inheritance in the kingdom of Christ and God. (Ephesians 5:1-33.)

May 18, 2018 11:22am

Flat Earth theory is correct - the reason why the stars rotate around the poles is because of electromagnetics - the laws of physics break down quickly once you've developed a singularity, which is essentially what I've done. I'm now in the Inner Earth, also known as Agharta.

Time Travel Epic

May 17, 2018 4:28pm

Whoops, I got the spin wrong. This location is now the new North Pole. That's on account of its counter-clockwise rotation. It might not seem like much at first but over time the field will strengthen and compel the rest of the planet to spin around it.

May 17, 2018 4:25pm

As of 15:28 AEST today a new dynamic is coming into effect. There will be a shift in politics to a more liberal mindset, the planet will heat up, and Australia will become the new South Pole.

May 17, 2018 3:57pm

Be prepared for a pole shift. Australia will be the new South Pole and the North Atlantic between New York and Ireland will be the new North Pole.

May 17, 2018 3:55pm

I fixed my time machine, but it only goes forward now. The reverse gear doesn't work. I'll be operating it now and in a few days a new dynamic will emerge. With the forward gear engaged, people's moods will generally improve and living conditions will also improve. Equality and togetherness is the new norm as opposed to inequality and separation which was prevalent since the year 2014 up until now. Of course, there is a spectrum of good and bad and at the moment we're on the bad end of business. But things are slowly improving. I hope to leave the forward gear on for a year to get back to square one but it might need maintenance if it starts acting up.

Time Travel Epic

May 17, 2018 3:53pm

I destroyed my time machine. It was pissing me off. The motors became too noisy. I don't think I'll make another one, either. Its purpose has been served, and that was to push the planet out of harm's way via geoengineering, or something like that. From now on I think we'll witness a shift towards cooling. The recent eruption in Hawaii is a sign of this. The planet acts as a kind of capacitor and when you have a difference in heat it generates a kind of heat exchange which resulted in the recent eruptions. The planet will cool down by about 2 degrees Celsius within the next year. Global warming alarmists will wonder what has happened, and there will be a kind of damage control routine happening in the science and climate change industries. I've pushed the planet's scalar field back into the position of Hades, and I've got no intention of moving it back to where it once was. I'm done with time travel.

May 17, 2018 2:33pm

I'm thinking about switching back to Linux. Windows 10 has become slow and unreliable.

May 15, 2018 10:05am

Multiverse theory is simply a means of interpretation, a legal fiction which aims to explore possible outcomes. While it hasn't been proven as a scientific concept there is a growing body of evidence which suggests it is true, albeit an insufficient one. Mathematically, it is possible, because superluminal speeds can violate causality, leading to a branching off of worlds. Paradoxes have a tendency of resolving themselves naturally. Relativity theory permits it, and relativity theory has been proven by CERN so it follows logically that the multiverse exists. If time dilation is real, and people have free will, then the multiverse exists.

May 15, 2018 7:56am

With the discovery of antihydrogen, the standard model is essentially complete. It follows that other symmetrical particles also exist and that Einstein's

Time Travel Epic

theory of relativity was right. Now that CERN has fulfilled its objective it will be relegated to the scrap heap of history and the planet will evolve naturally again.

May 15, 2018 7:48am

<https://futurism.com/scientists-just-made-a-major-discovery-by-observing-antihydrogen-atoms/>

Anyway, supersymmetry is still a valid theory. The only problem is that it only works at higher energy levels than what has been tested.

May 15, 2018 7:43am

In lieu of supersymmetry having been disproven, I think it might be appropriate here to disclose a certain rule of magic: You can only achieve positive results. You can't use magic to get rid of something, you can only add and veil and transform. That's a secret of magic I'm willing to share, because it is now more important than ever.

May 15, 2018 7:31am

<https://www.thenational.ae/uae/science-at-a-crossroads-as-supersymmetry-theory-falls-flat-1.218622>

This is a major blow for science. Since supersymmetry can't be proven, we can't understand how the universe works. I think research into cymatics is warranted. Maybe theory A was right, after all. The universe might be like a quantum computer which retains memory like an Etch-A-Sketch would, and not a bunch of approximations in mathematics like people think it is. In other words, the universe isn't a well-rendered 3D model - it is a

Time Travel Epic

co-ordinate system of atomic structures. Vector calculus isn't as important as people seem to think. The universe is more logical than that.

May 15, 2018 7:30am

<https://www.theguardian.com/science/across-the-universe/2017/may/17/multiverse-have-astronomers-found-evidence-of-parallel-universes>

May 15, 2018 6:33am

<https://www.smh.com.au/national/bad-news-for-the-multiverse-it-s-still-not-likely-20180513-p4zfl0.html>
This article is pretty interesting. Terence McKenna once said that "if you can imagine it, it exists somewhere in the universe". Maybe there are planets in this universe which are exactly like 1980, and by travelling to them you can affect the particular worldline. Such findings in this article are also congruent with Titor's assertion that there are 10^{39} possible outcomes in the universe.

May 15, 2018 5:36am

<https://www.rt.com/news/426394-venezuela-snow-andes-mountains/>

Laine Corporation is a living order. Therefore there are 33 characters. There are also some ghosts, too. One of the ghosts is an idol.

May 14, 2018 6:48pm

There are 12 characters in my world. There are 10 buildings. Everything in my world is custom made.

Time Travel Epic

Oh, and there are some other characters, too. There are also 10 idols.

May 14, 2018 6:47pm

I've got 40 years left to make 100 products. That's about 1 product every 5 months. I could divide the year into trimesters of 4 months each for each product. That way I'll be finished in 100 trimesters, or within 34 years. I'll be 69 by the time I've finished. But I've already made a sort of start. So I should be done by 2050. This is more of a prediction than a deadline.

May 14, 2018 6:16pm

May 14, 2018 4:16pm

So that's 16 books, 4 inventions, 10 music albums, and 3 feature length presentations (animations). If I do 1 per year it's going to take another 33 years. I'll be 68 by then. But I've already started writing for a year now. I predict I'll be done by 2050, just in time for retirement. Since I'm not doing anything else, I may as well do this.

May 14, 2018 4:10pm

Proofreading and rewriting my memoirs into a consistent narrative shouldn't be too difficult, but it would be quite laborious.

May 14, 2018 3:34pm

Just 13 more accomplishments and I can upstage Tolkien with a master number. Maybe I should design something like a dress or a suit. Maybe an animation series might be enough. I know. 10 music albums and 3 feature length presentations. That'll be enough for this life.

May 14, 2018 3:29pm

I can do this over the next sixteen years - that is to publish one book per year. I'll be at least 50 by the time I'm done. Tolkien wrote at least 31. But he didn't

Time Travel Epic

invent anything. I invented 4 things - a time machine, a simple gravity sensor, a healing rod, and a unified field theory.

May 14, 2018 3:26pm

I've got 10 ideas for my space epic written down in blurb format. That's a total of 14 books so far. I just need another 2 books to get a square number. Something like "Longevity Secrets" and "Transcending Carnality", a kind of one-two punch of physical and spiritual writings. I feel as though I'm not addressing the alien breeding program, though, so I'll include a few chapters on it in the last book.

May 14, 2018 3:09pm

I wrote four books this year, but they haven't been published yet. They're just a collection of memoirs of yours truly.

May 14, 2018 2:35pm

For comparison, me in the lab, and a prophecy to round out my photo album. I'm running out of ideas now. Hopefully my ideas are interesting at least. Cheers.

May 14, 2018 2:08pm

It strikes me as kind of surreal that the sun is mainly composed of hydrogen - an element with an atomic weight of 1. The way in which humans interpret the universe is wise and awe-inspiring indeed.

May 14, 2018 2:07pm

1.21 gigawatts will penetrate about 38,000 molar

Time Travel Epic

masses. In one second of discharge, this will provide a mass penetration spectrum in the range of 10 minutes and 10 hours - a far cry from 30 years as put forward by the movie *Back to the Future*. However, in the quantum range it might be accurate. The power rating for the device in *Back to the Future* can indeed transport density on the scale of an electron to 30 years in the past with the amount of discharge equivalent to a small lightning strike. Lightning strikes travel through time in this sense.

May 14, 2018 12:56pm

May 14, 2018 11:54am

I finally understand Einstein's famous equation, $E=Mc^2$. It's an exponential if graphed on a two-dimensional matrix with the variables E and M . It also applies to chemistry and explains why I'm seeing a lot of things changing and a lot of things staying the same (in relative terms).

May 14, 2018 8:37am

I was en route to the shop earlier and noticed a girl wearing a flannelette shirt. That's crazy. I also saw an articulated bus. I haven't seen an articulated bus in years. They must have made a comeback.

May 14, 2018 8:35am

<http://www.researchandappliedscience.com/> Where I'm from, the Israel declaration of independence was yesterday. Of course, I've travelled far back and the shemitah always seems to be in this same year. Other

Time Travel Epic

things which depend on a lighter density and a higher frequency have regressed even more. Well, that's it. I'm done with this time travel thing. I'd continue but it would necessitate servicing my time machine which I couldn't be bothered to do. In terms of the lightest density (before quantum mechanics takes effect), i.e. in the spectrum of hydrogen, I'm from 232 years in the future. In terms of the heaviest density, that is to say ununoctium, I've travelled 5 years into the future over a 6 year timespan. For the sake of convenience, it is best if I am from the year 2250. I was abducted by aliens in the year 2250 and transported to another world, after which I made this time travel machine and travelled here to the year 1780 which is your 2018. I've set up an office now from which I'll be administering some aspects of our ventures. This will help us to achieve our objectives.

May 14, 2018 8:00am

[https://www.alibaba.com/product-detail/deep-cycle-ups-power-5kw-lithium_60632660655.html?](https://www.alibaba.com/product-detail/deep-cycle-ups-power-5kw-lithium_60632660655.html?spm=a2700.7724838.2017115.23.205a6caaNIAMLb)

[spm=a2700.7724838.2017115.23.205a6caaNIAMLb](https://www.alibaba.com/product-detail/deep-cycle-ups-power-5kw-lithium_60632660655.html?spm=a2700.7724838.2017115.23.205a6caaNIAMLb)

My time machine has been travelling backwards for exactly 1 year now (accounting for subtracting time travelling forwards). That's 8760 hours. In that time I have achieved retrograde travel of 1 year in terms of the highest density which is ununoctium with an atomic weight of 238, and 238 years in terms of hydrogen which has an atomic weight of 1. That's the permanency of time travel which has been achieved. However, I'm able to make small temporary jumps at much higher rates of travel. The effect of these jumps lasts about 24 hours and I'm kind of limited, owing to

Time Travel Epic

the diminishing effect of the travel, to about 60 years per jump as Titor indicated. That's a limitation of the machine. Of course, more powerful machines are capable of much higher rates and their effects are permanent. That's all I have to say about my time machine. It can create closed timelike curves in all mass densities, but the heavier the element the more power is needed. A machine twice its power would be capable of real travel back including landmarks. A machine ten times its power would be equivalent to Titor's C204 unit and would run on 240V 40A.

May 14, 2018 7:02am

It's groundhog day. Before I set out to prove it, I'll give some background information. I got a notification for one of my old friend's birthday yesterday, and received the same notification this morning. Now, assuming that 240 times duration equates to time travel in carbon and oxygen per one unit of time, then we can assume that 2 hours equals twenty days on this spectrum. In real time, which is measured with quartz and caesium inter alia, the duration as compared with the density is significantly lower on the scale of twenty times, hence one day travel backwards was achieved. However, I distinctly remember the 13th as being her birthday (although it might be confused with Mother's day). Nonetheless, Sunday was her birthday while today is her birthday now. So there are some discrepancies which might need to be accounted for. Such are probably related to the relative nature of time and the server's tendencies to synchronise with one another in a hierarchy. As such, two hours equates to one day travel. Oh, and

Time Travel Epic

her name was Romanised on my phone whereas yesterday it was in Japanese. It's taken that 2.4 hours equates to 1 day travel backwards. That's a rate of 10:1. Now, we apply 8,500 hours and figure out that 85,000 hours travel backwards occurred. That's 9.7 years or 10 years rounded down. Now we figure out from the date of departure (4 years hence) and we get 6 years retrograde travel. So in terms of the densest material we've got a time period similar to 2012. The air and carbon however are more similar to the year 1780. As for which atomic weight is most similar to the year 1980, it would be the element with an atomic weight of 200. My ideas are finally coming to fruition. The atomic weight of ununoctium is 238, exactly the same number of years I've calculated as having travelled back. There are no coincidences.

May 14, 2018 6:18am

I've got several hours left to make a presentation in the hopes that it will create an effect in the future. But what can I do? Twenty two years from now I'll be in this same location. I had better make the most of this opportunity. The best I can do is upload some information to the Internet. I'll upload all my documents to the server. That will surely have an effect on the future. Some people from the US, Russia and Israel will see the information. I should take care to present it properly. Once I go for my injection at the clinic at 0900 hours this morning there will be no opportunity left.

May 14, 2018 5:26am

Mum brought back scones from Sydney. We don't

Time Travel Epic

have scones in the future. Scones are an archaic food which disappeared from the diet in the 2230s.

May 14, 2018 5:18am

People have ideas about time. Bedo and Killalea (2018) stated that "the chilly conditions will continue into the weekend where they will ease", as if time was somehow directly associated with space. Moreover, the Facebook team's option for viewing posts made previously at the same time of year indicate an understanding of how time is cyclical and how events can generally repeat themselves.

May 14, 2018 5:04am

<http://www.news.com.au/technology/environment/icy-cold-front-to-chill-cities-with-coldest-temperatures-in-decades/news-story/1975a86b0ccd281f1294387e8732f596>

May 14, 2018 5:01am

Fuck suicide. I'm just going to have to man up and take my depot injection today. I always fuckin' get like this before my depot. I suppose I still have the good life compared to the serfs. The fact that I don't have to take pills anymore and instead just take the injections kind of cancels out the requirement for injections. I deleted my research website and my blog though. I'm left with Facebook and Twitter now. It's a pity but I suppose the good thing is that I'd be able to concentrate my efforts on these two platforms. Thankfully neither Facebook or Twitter instantly deletes the accounts, so I'm trapped here for now. I don't have much left to say about my time machine.

Time Travel Epic

I'll be in this time period for another several hours before being washed back to the year 2030. My mission to seed information has kind of failed. This is the furthest I've travelled back so it kind of makes sense that my information wouldn't exist in such a time period. My time machine now makes a hell of a noise because the motors seem to have lost their bearings somewhat. I'm thinking about stopping the venture to travel back to Mars. I could possibly continue but I'd need to get new motors every year or so. It's kind of like a car - it needs tune-ups and new parts every now and then.

May 14, 2018 4:54am

One of my main peeves in committing suicide is that my room will be messy. I don't want to leave a mess for others.

May 13, 2018 11:52am

This profile pic is going to bother me in the afterlife. I'll be looking at Facebook from heaven and going "damn, I need to fix these pixels" etc. This is not over yet.

May 13, 2018 11:50am

Soon I'm going to attempt suicide. In my theory, suicide can be easily achieved and painlessly once my karma's been cleared. There are only a few things in terms of karma which need to be cleared before I'll be able to kill myself painlessly and allow my spirit to attain nirvana. Because of this, if anyone in the future claims to be the reincarnation of me, they're lying. That's because my karmic debt has been cleared and

Time Travel Epic

I've finally surpassed the need to reincarnate. Over the following days and weeks I'll be making preparations for my death. Once I've cleared up the past grievances in the form of repaying karmic debt to those I've affected, mostly by making monetary payments but also with small things like chores and reducing my carbon footprint to nil where it should be, I'll be making donations to charitable organisations like WWF and The Salvation Army. If anyone claims anything to my estate you should contact me so we can sort something out. Otherwise you'll only be able to claim \$1 from my last will and testament. There are a few other housekeeping things which I'll need to take care of as well and these will be addressed soon. I'm thinking about a drug overdose but that will be finalised.

May 13, 2018 11:47am

I'm here from the year 2030. I'll only be here for 24 hours. I've got some business to attend to and some research to carry out in this time period. I'll also be seeding some information which I hope will be able to make changes to the world. Time is short. There will be some events that occur in the future which will lead to a sort of evil power structure that is supported by Marxists. In the future there is an active opposition and ongoing conflict mainly in the media but the battle is a futile one. Eventually, the world will become a communist shithole. I escaped from that world and am here in 2018 by the grace of my time travel machine. But I'll only be here for about 24 hours, due to the temporary effect created by my time machine and my expiring time lock. I needed some

Time Travel Epic

time out and got it when I activated my time machine to come back here. I'm actually from the very far future but have been working in the year 2030 for about a month until I just gave up with the resistance effort. It closes in quickly. I need to study up on Marx while I'm here and make some notes. Anyway, prepare yourselves for a shit future in which the communists win. It's a real bummer. Anyone wanting to travel back in time with me, just make the same kind of machine I made here on Facebook and join me. The past is glorious, much better than the shithouse future. I suppose the only good thing about the future is the lack of war. But it's not enough. I hate the future. It's shit. My time machine has got problems with noise so I'm not really able to go back to my home time of 2250, a trip which would take 1 year in total.

May 13, 2018 10:16am

I can't find a specific post by Titor no matter how hard I try. It was relating to how "taking a simpler approach" enabled the rebellion to win the war. I guess I'm in an alien world now.

May 13, 2018 7:26am

It seems as though the global warming alarmists have really lost a lot of credibility recently. You know why? It's because of my actions. I solved the problem relating to the Earth's degrading orbit around the sun with a gravity drive. Now the humour will ensue. It's really funny seeing a bunch of psychopaths who tried to trick people into accepting a carbon tax based on a falsified theory about carbon emissions causing

Time Travel Epic

global warming get payback by a simpler means of solving the problem relating to global warming. Their whole political agenda is in shambles. It was based on Marxism and if history progressed naturally then they might have won - but they weren't expecting the effectiveness of my gravity drive to stop their maniacal plans.

May 13, 2018 6:46am

My alien superiors are telling me that I should destroy the planet with fire before embarking on any planet broking. I suppose that's possible - creating a fresh start like clearing an Etch-A-Sketch is what most planetary conquerers do. It's kind of like "clearing house" or "demolishing" to put up a new planet. But I've got pause for thought. For one thing, these people don't know where their father is. In Gnosticism they would have it that their father is the sun, so I'm a bit confused. Where is their god? I was told that "you just can't go around killing people". So what gives?

May 13, 2018 5:58am

Several years ago, I installed a game (the name of which I can't remember) about space exploration and conquest. When I started the game, I began in a small spaceship somewhere in space. Momentarily, I was gunned down by another more experienced user. It made me wonder about what hidden surprises lie in wait from other more experienced people in a particular field. I wonder how many secrets are being kept in the universe and in what manner they might be discovered...

Time Travel Epic

May 13, 2018 5:31am

It is written that the meek shall inherit the Earth. What we're witnessing with Trumps' rise to power is his representation of the forgotten ones fulfilled in scripture.

May 13, 2018 5:28am

To put it simply; if you want to figure out where you are in time you have to measure three things (related to the standard model): Which galaxy you are in, which solar system you are in, and which planet you are in. By determining this you can understand where you are in a universe of 10^{39} outcomes. I'm from an unknown planet in a different region of the galaxy, closer to the galactic centre. My star was closer to my home world. That's why I'm so small - it's because of the gravitational influence of the star and to a lesser extent the centre of the galaxy.

May 13, 2018 5:12am

There seems to be a dearth in updates and notifications on WordPress. It's as though everything has gone quiet.

May 13, 2018 4:21am

I've just come across something - the share count on my most recent post has increased to 1. Maybe someone shared it? The share links are to either Twitter or Facebook. I personally shared all the articles before but it didn't increase the share count. Something's fishy. The article posted which was shared was about minimising divergence. I might be

Time Travel Epic

onto something here. Never mind, the site is back up.

May 13, 2018 4:19am

I'm actually really spooked about what's going on. Websites don't simply vanish. This isn't a problem with connectivity either, because my HTML banner ads are still displaying. But the WordPress site has been surgically removed.

May 13, 2018 4:14am

That's funny - my WordPress site is down. Maybe someone or something altered the timeline. I suppose I'm getting too close for comfort in developing this time travel technology.

May 13, 2018 4:10am

My navigation system leads a lot to be desired. While it is true that I'm able to travel to any point I want to in six dimensions, it might not be enough to create closed time-like curves in the way I want it. Let's say I wanted to travel back to the year 1980 to save someone's life. I'd need to be in the same spot in the multiverse for that to happen. But there are 10^{39} destinations in the multiverse, and only a few of them will help me. It's like looking for a needle in a haystack. I'd need to get the 6 parameters of space-time right. As I remember them, they are proximity to the sun, proximity to the galaxy, proximity to the big bang, and location in three dimensional space.

May 13, 2018 4:09am

Every possible outcome exists in the multiverse. My time machine allows you to control the conditions of

Time Travel Epic

space and thereby influence the outcome of your present situation. Whatever you want, you can have. Whatever condition you want to be in, you can do it. My device alters subjective reality - it's like a vehicle. In fact it is a vehicle - a time vehicle. But it also traverses space. One of the problems I've got with this machine is that it takes a long time to get to where you want to go in the multiverse, and once you get there, one small change can alter history as you know it and cause all sorts of effects later on. At the moment I'm sitting here wondering what to do and where to go. Doing something like creating a closed time-like loop like playing the lottery would take at least a year so if I want to do something like that it better be worthwhile. So doing something like betting on the lottery isn't worthwhile as it would take several years to get a result and even then other conditions and changes to the timeline might result in the unexpected.

May 12, 2018 11:09am

The master timeline has been altered almost beyond recognition. You can in fact travel back to an exact version of the past just how you remember it, but it would take a long time. If you wanted to travel back 30 years, for example, you'd need to use the time travel machine for a total of 15 years without stopping. If you stopped the time machine and had a break for a while, then history will catch up with you again, so you need to use the time machine for at least 50% of the time. And if you only use it for 51% of the time, for example, you'll get nowhere. I'm at the point where I've travelled back 2 years but 4 years has

Time Travel Epic

already elapsed, so instead of travelling to the past, I've travelled 2 years into the future over a 4 year timespan, and I've been kind of stretched for resources during the whole time. Time is cyclical, though, and because of this I haven't been in complete suffering. Many opportunities present themselves when the time field slows down. If you want to go back quickly and not have to do some campaign or mission to travel back several years, you're going to need a lot of power. That's the beauty of the DeLorean. But in lieu of such power, you can still get by with lower powered devices like mine. But you need to be a real survivalist. If you're prepared to accept differences in the world on the order of about 5 to 10%, then you can travel back quickly. It kind of irks me, though, that landmarks exist which I wasn't expecting in such time periods. I suppose it might be best to ignore them. The only way to address the problem of landmarks existing is to travel back far enough in the spectrum of atomic weights so as to lose them. I'm not sure if that would work or not either. Supersymmetry is still a theory and hasn't been proven yet. But everything in science suggests this one fact. If it's wrong, then a lot of physics must be wrong too. A thought experiment to prove it is one thing but you need objective evidence, and so far we haven't found anything.

May 12, 2018 9:26am

Let's figure out how much energy is needed to travel back 30 years into the past with 0% divergence. This is a new idea which I've just had. Let's approximate first and later on we can flesh out the details. 8,500

Time Travel Epic

hours in use has elapsed. That's 0.97 years. Let's round it up to 1 year for simplicity. In that 1 year, approximately 2 years forward travel has occurred. Of course, the 1 year travel time is spread out over 4 years. So, essentially, the device works at 2:1 in closed time-like curves (accounting for all energy densities). That means that you would need to run the device for 15 years constantly to travel back 30 years. The device runs at 12 V 40 A (or 480W). We want to get travel time down to a second. So all that we need to do is figure out how many seconds are in 15 years and multiply that by 480 W. There are 473,040,000 seconds in 15 years. Multiplied by 480 W returns 227,059,200,000 W. That's 227 gigawatts. If you used 1.2 gigawatts, you'd need to run the machine for about 3 minutes. Now let's figure it out with 5% divergence. 240:1 is the nominal ratio for travel backwards in the aether. 3,942,000 seconds running time is required to travel back that much at 480 W. If you were to go in one second, it would require 1,892,160,000 W, or 1.8 gigawatts. 1.57 seconds would be the required running time at 1.21 gigawatts. In order to allow for time travel into the past, tachyon energy must be used. (That's what's created with my own gravity drive in reverse gear.) To generate tachyon energy in an electromagnetic field, you could use two coils wound against each other. But we're talking about a lot of energy here. You could also use two opposing electromagnetic fields. (That's what my machine does.) To put it another way, the DeLorean in Back to the Future is about 4 million times faster than my time travel machine in terms of temporal displacement. I think the divergence in Back to the

Time Travel Epic

Future 2 with branching timelines was handled beautifully. I'm still trying to get over the fact that I've got a fully working time machine now. This project has been successful beyond my wildest dreams.

May 12, 2018 9:04am

As fortune would have it, I've now got a benchmark for the heaviest elements to work with in my time travel endeavours. I can travel back to where air and carbon are more like 200 years ago whilst retaining the influence of a retrograde travel of 2 years in heavier elements and alloys like steel. My estimations indicate a 1% effectiveness rating of elements like steel compared to a 100% effectiveness rating of air (oxygen, nitrogen, etc.) The findings are congruent with the element's atomic mass units (weights). My research is now complete. With this data, and my research spanning a couple of hundred years, I'm able to go to any point in the space-time continuum, including exact versions of the past. Of course, any changes made to the distant past affects the future in unimaginable ways. This is a cause for celebration. I've got one beer left. I'll drink it later on today.

May 12, 2018 8:35am

On a closer inspection, it seems as though my height has actually diminished. That's what I was expecting. I suppose I was right, after all. I'm still pretty tall. My height has diminished by about an inch. As such I should be 180 cm.

May 12, 2018 8:29am

I'm just comparing photos of myself with the exact

Time Travel Epic

framing from pictures from a couple of years ago and it seems as though my height has increased in stature. I was expecting, with the use of my time machine, that my height would diminish because of the lower gravity, but instead it has increased. I wonder if this has something to do with the ever-expanding nature of the universe. Now I get it - the fallen angels had offspring which are very big. I'm like a fallen angel because I'm from the future which is a lot more like heaven. So, if I were to travel into the far future, then my stature will diminish. I wonder if I should try it.

May 12, 2018 6:03am

The sky event per Anon Q is coming soon. It has already begun in Singapore, and there will be another sighting in Yokohama. As it seems, the wave penetration of my device has regressed heavy structures like steel to a few years back. I can't

Time Travel Epic

remember whether contact will be this year or next year. I distinctly remember a ship coming into contact with the Yokohama Landmark Tower but the year escapes me. Now I remember. It was just after I left. That means my penetration rate in terms of steel is at about negative 3 years. Anything in "concrete" terms is regressed by 3 years, whereas anything in terms of air and ideas is regressed by 238 years, and there is a whole spectrum of mass in between. Strategy relates to the realm of ideas, although the machines used to implement such ideas are more advanced than I can recall. That's because of their mass. When something is heavier it isn't affected so much by my time machine. I'm also seeing this I once remember fade out of existence, including buildings, people, and objects. It's reassuring to me because it means that retro-causality is possible in the multiverse and I can indeed make changes which affect the space-time continuum as perceived by myself.

May 12, 2018 5:09am

How interesting. It seems, in looking at many pictures of the skyline of Yokohama, that the buildings have regressed. There was a starship which docked with the Yokohama Landmark Tower in the future, much like what you see with Marina Bay in Singapore.

May 12, 2018 4:50am

It seems as though the heating effect of the temporal displacement machine has worn off. If the time machine is kept unused from now on, the temperatures will begin to get even colder. On average, a difference of about 2 degrees Celsius is

Time Travel Epic

anticipated.

May 11, 2018 2:09am

Young people tend to get impatient with time travel quickly. They expect a lot of things to happen all at once. Well, that's not how the universe works. As 8 Bit Pimp once said, "the universe is huge and old and where things happen all the time."

May 10, 2018 8:11am

Humans will soon reach the limit in the development of autonomous robots and how they can be deployed in various settings; i.e. construction, human interaction, transport, etc. The costs of developing such technology outweighs the benefits and humans will experience diminishing returns in their efforts to let the machines do all the work. There's nothing like manual labour which can help to foster and grow an economy. Automation might make things cheaper in the short term but there are some things you can't automate without considerable risk to the environment and production. No matter how hard people try, there will never be walking androids

Time Travel Epic

manufactured much less androids capable of critical thinking. An android is nothing but a sophisticated puppet which can only be programmed to perform limited functions. Humans will try and succeed in making a variety of sophisticated and useful robots. But the idea of making a fully functional android, much less a battle worthy mecha or even a robot which can sort the laundry being mass manufactured is a tall order and a lofty goal which will never be realised.

May 10, 2018 4:33am

Someone called me a "freak" at the bus interchange several months ago. It just goes to show that I've traversed to a world in which people have evolved differently than I have.

May 10, 2018 1:45am

<https://academic.oup.com/analysis/article/78/2/260/4746578> This academic argues that time travel to alternate world-lines is impossible because of an apparent lack of freaks from different dimensions. I would have to disagree with him that just because it's possible that an alien freak might travel to our location in space-time, doesn't mean that it would actually happen. In fact, there are many freaks claiming to be time travellers, including myself. My head is bigger than people of this world and it's almost as if I've got two heads, in a way. A native of this world or a few dimensions back away from the strange attractor would in fact describe myself as having two heads. I don't want to upload a photo of myself because I'm such a freak compared to the

Time Travel Epic

beautiful people of this world-line. This world is like the world in the movie "The Dark Crystal", but the people are so beautiful like the keflings.

May 10, 2018 1:45am

It seems as though the Internet has become a place where mentally ill and people who are disabled gather, and not much else. Journalism on the Internet and thanks to the Internet in general is dead. The dregs of society remain and not many other people, mainly owing to the fact that the "well to do" are more caught up in their own affairs and have little time to be online. None of my friends from high school and college post anything any more, and if they do happen to occasionally post something, there is a scarcity of attention given in the actual posting or receipt of any meaningful information. It's kind of sad and kind of boring. I don't understand what people do besides work. It's as though they're mindless zombies just working and consuming to no end without any imagination, creativity or originality apparent. If they do have some kind of original thought, they would likely take it to the grave with them. I suppose humanity really is overrated in this sense. There were signs of intelligent humans throughout the 2000s but ever since 2012, the so-called end of the Mayan calendar, people have become introverted and mindless, chattering away on mindless topics without any kind of evidence of sentience. Einstein once doubted whether there was any intelligent life on Earth, and I'm beginning to agree with him. It's lonely at the top.

Time Travel Epic

May 10, 2018 12:39am

Global warming is caused by a lack of carbon dioxide in the atmosphere. The recent proliferation of fuel efficient vehicles leading to lower emissions essentially deprived the atmosphere of carbon dioxide, which in turn allowed for IR from the sun to heat up the atmosphere. Without carbon dioxide in the atmosphere, more energy reaches the surface of the planet, causing it to heat up. The global warming alarmist faction of the Illuminati foresaw this and twisted it into the current idea that global warming is caused by carbon emissions (when in fact it is the opposite). The idea to create "clean energy" further exacerbates the problem of global warming and the Illuminati know this, which is why they are hell-bent on creating a panic and proposing a solution which leads to more panic, which allows them to reap the financial benefits of imposing carbon taxes. The good news is that we've engineered a weapon which has put a monkey wrench in their plans, so to speak. The anti-gravity drive which I invented compels the planet to recede away from the sun, creating the necessary conditions to cool the planet down by moving it away from the sun. So far it's working - in the past year temperatures have come down as a result of using the device. The lack of carbon dioxide emitted as a result of the Illuminati's efforts cannot make up for the discrepancy, and people are beginning to question the government's credibility and the credibility of the global warming alarmists. They're in damage control mode now and are trying to manufacture facts which support their ideas that the planet is warming. They'll stop at nothing to keep

Time Travel Epic

the planet from cooling as a result of the use of the device which I've engineered. But their plans won't come to fruition. You see, I've already pushed the planet back to the region where it was about 200 years ago. So it's going to take the Illuminati 200 years to catch up in terms of increasing the planet's temperature to support their global warming theories. The beauty of my plan is that it works 240 times more effectively than anything the Illuminati could muster up, and what's even more amazing is I'm bestowed with the blessing of plausible deniability. The way people see it, my invention is nothing more than a gimmick. But they don't seem to understand its true power and its true potential - it is indeed capable of shifting the planet back by scores of years and thus induce global cooling.

How to create the right conditions for economic prosperity, like what was seen during the 1970s and 1980s? I think, like many things, economic growth shares a relationship with other factors. There are some powers that will not allow for such conditions to exist, and for good reason. Economic growth is

Time Travel Epic

damaging to the environment, for example. It also creates inequality and segregation socially. But it can be good for humans - economic growth creates more jobs and more competition leads to lower prices and low inflation. Anyway, how can we create the conditions for another boom? All other things aside, let's look at the relationship of food prices and the activation of my machine in reverse gear which compels it to go to Mars, with the scalar field of the world as well. In other words, by imbuing the world with tachyon scalar energy, it is compelled to drive back into the restless cosmos away from the sun. When the scalar field moves closer to the sun, gravitation takes hold and causes the entropy of objects under its influence. By going away from the sun, restlessness is caused, generating economic activity. At the moment, the planet is in the same vicinity it was during the year 1780, thanks to my efforts with my time travel machine which displaces gravity. Because of this, economic boom conditions are generated. Problem solved.

May 09, 2018 1:19am

<http://heiwaco.tripod.com/bomb.htm> This article proves my research into radioactivity and particle decay. When I discussed the half-life of certain elements and their relationship to the asymmetrical structure of matter in the universe, I didn't intend to mislead the reader by pseudoscientific babble with respect to the different values and intricacies of particular elements like uranium and ununoctium. In other words, I stated that heavier elements have in general (although not in respect to chemistry

Time Travel Epic

specifically) a longer half-life than lighter elements. For instance, the half-life of helium is $7.6 * 10^{-22}$ seconds which is a really short time span. The half-life of palladium, on the other hand, is 6.5 million years. It just goes to show that objects with more density are generally more stable than lighter objects, and I'm not talking about radioactive isotopes either, the subject of which seems to confound people's thinking into such matters. Anyway, this post simply serves as more proof of the gestalt that is my invention.

May 09, 2018 12:12am

To date, nobody has debunked my theory of space-time and the working principles of my time machine. Someone came pretty close when I put a paper up for peer review, but my ideas dragged her down to my level and beat her with experience.

May 08, 2018 10:31pm

My associates, mainly family and old friends, seem to hate me. I suppose they're just jealous because I invented time travel and they didn't think of it. So they conspire behind my back and tell jokes, etc. Well, the joke is on them. We'll see who has the last laugh. (Hint: I'll have the last laugh.)

May 08, 2018 10:29pm

Luthor Laine shared a memory. I was just now entertaining the notion that the time machine travels at a nominal rate of 10 years per hour, but this nostalgic post from a year ago has reminded me that 10 years per hour is the wave function of the time

Time Travel Epic

machine. I'm now also reminded through this language of a particular extraterrestrial communication which I've been having since 2012, indicating a kind of "wave function collapse" which occurs when the time machine has been put to use. Such a thing was communicated to me telepathically when I began freaking out and hallucinating after putting the time machine to use. Unfortunately, in reviewing the usage data of my time machine, it seems as though the virtual gravity lock system has allowed for time travel back to the year 1780. Of course, this era is nothing like what I expected it to be except a few things. However, I'm still able to perform wave function collapses with my time travel machine. When I do that I kind of freak out mentally because so much changes. I think "theory B" of time (as addressed in philosophy) holds true in this respect and when I travel through time I'm merely travelling to the nearest respective dimension that approximates the time travel. As for the persistence of landmarks, I'm pretty sure that with enough travel and faith as a mustard seed, I'll be able to travel back far enough so that the landmarks aren't so persistent. I think it has something to do with supersymmetry and the density of the landmarks. Now, although concrete is about the same density as humans or air, it is in my thinking significantly denser to an extent which allows for its supersymmetric existence across long time periods. Someone important once asked me "what's with the wonders? Wonderment? The latter of the two?" I suppose the best answer that I can think of to those questions is that "man fears time, time fears the pyramids" and the pyramids fear cymatics.

Time Travel Epic

May 08, 2018 10:17pm

I've just finished updating my website. Now it's time for a break. I'm also going to resume business in a little while. But for now I'll just take it easy.

May 06, 2018 9:45pm

A couple of years ago I announced that development of cold fusion technology requires specialised knowledge in design and engineering, only to be rebuked by a fundamentalist who held that other skills are also necessary. It just goes to show how undeveloped this world is and the fact that cold fusion remains under-developed in this world supports my theory that my time travel machine actually works.

Time Travel Epic

May 06, 2018 5:47pm

This is gonna be a big project - reconciling GR and SR, thereby allowing for the creation of a grand unified theory. I bet I could squash the whole space-time continuum into one dimension of 1s and 0s. The only question that remains is how? How could you equate the movements of planets, stars, and other celestial bodies to allow for scientific prediction of what occurs on Terra Nova? Let's bust this theory wide open and see! The first call to order is for the discovery of a grand unified energy which holds the universe together. It is through studying this dimension, and this dimension only (and also as it relates to other dimensions) that we'll be able to figure out the true nature of space-time. Since the laws of physics change from one location in the universe to the next, we'll have to try and account for these changes in the grand unified theory, although I'm sure there will be limits to how this change can be observed and objectified in our theory. Hence, it is a theory of the multiverse which should be useful in a radius of about 1,000 parsecs (enough to encompass the human experience as we know it). I'll call this sphere of influence the "Luthorverse" and only advanced and totally different civilisations can mess with it. The bubble in which I'm talking about relates to the way in which physics has been observed to function as it has been observed over the past 6,000 years, and that's a lot of information, with data reaching back to the big bang, so my theory should be good for time travel within about 20 billion years (4 billion years back and 16 billion years forward). The basis for this theory is the observation that time is a

Time Travel Epic

function of 4 dimensions (in its most basic form), hence $t = f(a, b, c, d)$, the four dimensions comprising tomorrow, yesterday, today last year, and today next year. The derivations from this equation in other dimensions (such as how many apples can grow in a particular season, or how many oranges were purchased on a particular date) are vast and infinite, and give us a solid grasp on the likelihood of predicting future events accurately. For example, how many people can predict that Christmas occurs on 25 December? It's easy and there are other things different from national holidays and anniversaries which can be predicted with this particular theory. Of course, you can add other dimensions too, such as the position of the planets at any one time. With my device you can travel to any place in the universe. You bring some of the Earth with you and it can be like the movie "Zathura" some times because the rest of Terra Nova doesn't catch up every time. When that happens you'll see a kind of haze or mist around everything as the harmonics compel the rest of the scalar field into existence. In doing so, you are able to travel to different worlds. The pattern in which you travel kind of zig-zags up and down so when you've travelled about 10% of the universe, you end up in Mars. Spaceships can take a short-cut through all that because my time travel machine jumps through the quantum soup of the multiverse to the next Earth and so on until it has scanned the entire outcome of being on Earth and continues on with Mars. That's if you engage the machine in "up" mode. You can also go "left" and "right" with the appropriate gears engaged. As for going "down" that is also possible with a

Time Travel Epic

combination of using the "left" and "up" gears. My machine goes in three directions - "up left" "down left" and "right". During 2007-8 I travelled about 1,000 years into the future with an ioniser. The future is hot like Venus. To go back to Mars, you engage the reverse gear, and with the ioniser on you can go an extra dimension in time, forward and backwards. There are three dimensions of space and three dimensions of time allowing for a universe about 20 billion years old to exist in a sphere of influence of about 1,000 parsecs. This is my bubble I'm talking about. Outside of that the laws of physics are different and you have all sorts of alien influences there. It's not my domain. My domain is limited to a sphere with a radius of 1,000 parsecs. That's my dominion. Although it does span the multiverse to some extent. 6 dimensions of space-time in this respect only allows for a multiverse the size of a sphere with a radius of 1,000 parsecs.

May 06, 2018 5:25pm

Do you want me to do the equations reconciling GR and SR or not? Let me know and I'll see what I can do.

May 06, 2018 4:53pm

<https://futurism.com/new-research-may-reconcile-general-relativity-and-quantum-mechanics/>

May 06, 2018 3:54pm

If I were to travel back for about a week, I'd witness a civil war break out in America. The era is pretty well embellished now, as it's been figured out on two

Time Travel Epic

methods of calculation. It seems there have been a lot of changes made to the past which I'm still trying to come to terms with.

May 06, 2018 2:36pm

I've figured it out; it's right on the money. In projecting the average number of sunspots out from 1700 I devised a way of pinpointing the average number of sunspots in a year to a time period on my chart. It's given the figure of 1780 for the next twelve months which is exactly the year I figured out using the basis of 240 seconds for the virtual gravity lock on my time machine. As such I'm from a couple of centuries in the future...

May 06, 2018 2:30pm

8675.39493 total hours in operation. Multiplied by 240 and divided by 24 and then 365 gives 237.68 years total travel with the virtual gravity lock. That returns a date of 1780.32.

May 06, 2018 2:28pm

1028.2

May 05, 2018 5:45pm

1027.2

May 05, 2018 3:46pm

En route to the shops earlier today, I noticed an old car from interstate. It seemed to be in as new condition, but the design was something out of the late '80s as it seemed. The cars which are parked nearby and in this city don't change much, but the

Time Travel Epic

cars from other areas of this city seem alien and sophisticated.

May 05, 2018 2:56pm

The back door doesn't squeak when I open it. That's a good sign that the temporal traversal is in effect. Normally, it would squeak when I open it but it seems to have returned to its original condition. It may not seem like much, but I've found that noticing these small things helps a lot with gauging the effectiveness of the temporal traversal. When I held up my hand which has a keloid on it to the device, I noticed that it would begin to "heal" quickly. It isn't so much healing which is done but instead a reversion to its original state.

May 05, 2018 2:41pm

I just noticed some transaction in my bank account which defies mathematics. First of all, I'm unable to overdraw my account using a debit card. But then I looked at my bank balance and it had been overdrawn from a debit card purchase. That purchase was from about a week ago, and the bank reversed that particular transaction just today. I take it to mean that some kind of temporal traversal occurred in which causality was violated. That's the only way I can understand the accounting discrepancy. According to my log, the reverse gear was engaged at the time. After that I had disconnected the negative ion generator. It seems as though with the negative ion generator disconnected, the device works much better than with it connected. I engaged the forward gear as well during such time and must have traversed into a

Time Travel Epic

parallel world in which my account balance was different. The location of the bank's servers in relation to their proximity to my device might have played a part as well.

May 05, 2018 1:23pm

I'd just like to say something about these projected statistics - while they illustrate a tendency for inflation to decrease over time, because my time machine has been in effect since 2015, the inflation has actually increased year on year since. Although there is a projected decrease in inflation, the use of my time machine could negate the effects leading to inflation in the near-term future. As such this projection, while illustrating the tendency for inflation to decrease over time, can be negated by the use of my time machine. That's because the effects of my time machine are felt in GR as well as SR - there is a kind of gravitational vortex which manifests when it's activated. I've got kind of two minds about whether or not the time machine should be engaged in forward gear, reverse gear, or left dormant over the coming months, so I can't comment on what the flow-on effects to inflation should be. If nothing else, this chart which I downloaded from Statista should illustrate the general tendency of inflation as it progresses through a natural precession of time. The development of time travel technology is unprecedented and if someone else makes a similar device, then all bets are off. Insofar as I'm concerned, the effects of the device might be limited to subjective experience of myself only if the space-time continuum should be warped out of recognition by

Time Travel Epic

multiple devices. If that were to occur, then a whole new dynamic of the way in which economics and other cycles including natural cycles progress throughout time. That's not to say that similar technologies don't already exist - in fact, the presence of forces which interfere with my own experiments seems to indicate that other such device do in fact exist and are in operation. Nonetheless, my machine is reliable enough if used over fairly long periods of time and I can quietly manage it through the manifestation of a solipsism, regardless of the existence of external influences which at times seem to confound the operation of my own device. To this effect it would seem that my device works in SR only and any effect to the greater world and universe observed is according to my own experiences. It is convenient, however, that in recording such data as economic indicators, weather records, etc. the overall direction of such is as anticipated and congruent with the use of either gear - forward or backwards - and the effects associated with one or another particular use of the device. Because of this, I'm solely responsible for any long-term economic outcomes which may be made manifest as a result. But because the device seems to work in SR, as indicated by a lack of external influences when the device is used for prolonged periods of time, I can't be objectively responsible for any conditions which result as a manifestation of the effects of using the device. It works like a vehicle. It was once said that if you had faith as a mustard seed, you could move mountains. Well, driving past a mountain is like moving it relative to where you are, as much as creating

Time Travel Epic

economic conditions in the world around you by travelling through time is like moving mountains, in a sense. So basically what I'm trying to convey is the notion that indeed my time machine works in SR and it takes you to alien worlds. I'm just surprised at how effective it has become ever since I've disconnected the negative ion generator. It's as though the negative ion generator acts as a kind of "brake" which causes the scalar field to slow down in its direction towards or away from the strange attractor at the end of time. Oh, and the device is navigated by means of the "knight's tour" in the sense that it can go in two directions only - forward and backward - but as "all roads lead to Rome", then it follows that all planets, stars, and other celestial objects are connected in the same dimension - the dimension of time, which can in fact be divided into the 6 key parameters of measuring space time, hence 6 dimensions. In having 6 dimensions and the means to traverse across space in such an amount of dimensions, then you can make short-cuts across space-time. That is the scope of the completed machine which should be made by the year 2034. The deadline is 2050 but I expect it to be done sooner rather than later, and when it's complete we'll be able to travel to any point in space-time in the known universe, and beyond (if measurable).

May 04, 2018 6:05pm

This time machine is really effective now that I've disengaged the negative ion generator. I'm seeing ripples in the air now and am beginning to hallucinate. It also caused a huge drop in air pressure and rain clouds are accumulating. It's a bit noisy,

Time Travel Epic

though. Now I'm getting a problem with formatting on Facebook. It seems as though things are going to get really interesting from now on.

May 04, 2018 3:21pm

I'm seeing some instances of out of place text on Facebook and there was some data missing from my profile. I wonder how many servers Facebook has and where... It would explain a lot of things.

May 04, 2018 2:06pm

Following a planned power outage today I switched my computer back on and the LCD displayed a message which I've never seen before ("energy saving is active"). I might have traversed into a world where energy is scarce, hence the seemingly new feature of my LCD. I shit you not. I've got something else to say regarding the development of my time machine but I just need to get my bearings here.

May 04, 2018 2:02pm

I put the gear in forward for a few hours today and got a massive headache as a result of the sudden rise in air pressure. It's back in reverse now and my headache has gone away.

May 03, 2018 10:01pm

I shut the machine down. I might activate it again tomorrow but it's too noisy at the moment.

May 02, 2018 8:02pm

My ghost is back. It must be a spirit from the year 1800 or so. I won't be in this time period for long.

Time Travel Epic

There are a few things I've got to take care of before allowing the wave to take me back in about 24 hours from now. I'm taking requests as I see them to change the past and will be open to any suggestions, with the one caveat being that such requests must advance the human race significantly. My ghost is here now and I'll be under her direction for the following 24 hours or so. There's going to be some wave-like traversal of the era so I'll be out of touch over the next couple of days, but in about 24 hours I'll be back where I can make more permanent changes to the world in ways which are difficult to imagine. I'm going to be frequenting a couple of forums for the rest of the night and will see what I can do to help others.

May 02, 2018 7:58pm

I'm going to engage the forward gear in a moment. I'm just going to have a drink first and celebrate the historical achievement.

May 02, 2018 2:44pm

I'm slowly coming to the conclusion that being here in the past sucks. There is a lot of aversion, a lot of conniving, and a lot of grief and sadness in this particular area of time. I suppose people have limits. Well, I've got limits as well. I'm seriously considering activating the forward gear maybe later on today. I'll switch the reverse gear off now.

Apr 29, 2018 7:53pm
I quit the experiment. I'm going to do different things from now on. I'll call it a partial success, but I've been unsure about many different things which seem to confound my ideas. Per the law of diminishing returns, I'm not getting much more out of this experiment. I don't know what else to do but I'll think of something. Nah, it's been a failure. The best thing you could make out of this construction is that it's a gimmick which messes with clocks like the HDR or the STM. Now it's on to better things. I'm still interested in making techno music. Maybe I'll just take it easy for a while. This whole venture has been a farce, kind of like how the moon landing was faked. Hardly anything good became of it. There was some

Time Travel Epic

good about it, namely the way in which it seemed to change the atmosphere, and the idea that it caused inertial gravitation. It was fun. But now it's over.

Apr 29, 2018 5:37pm

The storm continues. It's been an hour so far. I wonder how long it will go on for. The experiment will continue.

Apr 29, 2018 4:06pm

There's a storm going on now, I just heard a weird screeching sound, and there are some unusual birds outside. I'll keep the experiment running for a while longer.

Apr 29, 2018 3:33pm

I'm a little bit nervous right now. Today's experiment has produced phenomenal results already and it's only been a few hours. I'm going to check something. I'll be right back.

Apr 29, 2018 3:09pm

When you travel through time, it's better to keep the room cool to allow for better propagation of neutrinos. This applies to reverse time travel only, however. I can't think of any way in which a cool environment could help in allowing for travel into the future.

Apr 29, 2018 3:07pm

I've thought of a thought experiment to better understand the navigation system. There are two dimensions involved in this thought experiment: up

Time Travel Epic

and down, and left to right. The ioniser causes the scalar field to go right. The reverse gear causes the scalar field to go left and down. The forward gear causes the scalar field to go right and up. The reverse gear, when engaged in conjunction with the ioniser, causes the scalar field to go up. Now that you've gone up for 20 parsecs, how do you get back to the original point in time? Well, you're going to have to engage the reverse gear to go back down, but you'll be too far left. Then you engage the ioniser exclusively and you'll be back in your home world. As for the reason why the reverse gear when used in conjunction with the ioniser causes the scalar field to go up, this is answered by calculating the average degree of inclination when the scalar field is being pulled in two directions - think of it as popping open a bag of chips. When the packet is pulled in two directions, the air inside is released upwards. Ooh, I got some thunder. The experiment seems to be working.

Apr 29, 2018 2:56pm

Increase in ionisation leads to increase in sophistication of the technological development of the world. I learnt this the hard way. The reverse gear, when engaged, creates a Lense Thirring effect which ultimately decreases the level of ionisation. When the ioniser is on, the third dimension of time on the z axis comes into effect. With both gears on, this causes the space-time machine to shift up in time. In order to travel sideways, the y axis must be controlled by manipulating temperature. Studies might shed some light on the subject but the level of decrease in ionisation with the reverse gear engaged seems to be

Time Travel Epic

at 45 degrees inclination, allowing for the decrease in ionisation as well as a traversal away from the source of gravitation. In order to get back to my home world, I must use the forward gear without the ioniser. I'm directly above my home world. Owing to having travelled up in the time dimension, I can freely traverse this own world's history by engaging the reverse gear without the ioniser. The VGL system is rated at 240 seconds, so to get back to the year 1980 on this world will take 57 days total running time.

Apr 29, 2018 11:07am

Shit. Time's running out and I still don't have a Netfinity 5100. I need that computer to do the necessary 6 dimensional algorithms. Without it I have no way of navigating the space-time continuum.

Time Travel Epic

Apr 29, 2018 10:53am

[https://www.ebay.com.au/itm/UNI-T-200-000-Lux-Digital-Light-Meter-Luminometer-Meters-Luxmeter-Photometer-WL8/112471625818?](https://www.ebay.com.au/itm/UNI-T-200-000-Lux-Digital-Light-Meter-Luminometer-Meters-Luxmeter-Photometer-WL8/112471625818?hash=item1a2fd4d05a:g:FesAAOSwjKFZXhqO)

hash=item1a2fd4d05a:g:FesAAOSwjKFZXhqO If you're serious about time travel, then you're gonna need one of these. It's used to measure the light of the sun. To get a good result, take a sheet of paper out on a sunny day when the sun is at its apex and measure the light of the paper. You'll need to do this every day for a year for a specific location because the light of the sun changes in the seasons. Once you've done that, you'll have a reliable way of measuring sunlight at any given moment. My step dad had one of these with his camera work but he seemed to be up to something else too. I bet he was a time traveller from Mars. Oh, and if it's a cloudy or rainy day, don't worry. Just fill in the blanks using projections for the days in which measurements aren't possible. By doing this you'll have a good idea about the sixth dimension and in using a photometer in conjunction with a thermometer and a barometer, you'll be able to calculate 3 dimensional time. 3 dimensional space is different and when you use the device you'll find yourself on alien worlds. I'm going to address this problem in a little while but I might need to do some more observations. This whole project might take a while but once we've set the starting points and parameters it will be a lot more easier than it seems at first.

Apr 29, 2018 10:16am

I don't think a spreadsheet is going to cut the mustard

Time Travel Epic

in terms of achieving what we need to achieve. We're going to need to calculate this shit in 6 dimensions. Once we've done that, victory will be close at hand.

Apr 29, 2018 9:47am

We need to get that database online. I think that we should get the cloud storage done on a particular server which will serve as the universal mainframe.

Apr 29, 2018 9:39am

I think I might have figured out what the VGL system means in Titor's lore. When the device is active, it can travel at 10 years per hour at 100% power. But the scalar field reverts to its original level when it's switched off. I think this is where the VGL comes into effect. It goes at 240 seconds (assuming per second). So when you travel a specific number of years into the past, the gravity in the area has a tendency to revert to its original level, which is determined by how far the VGL goes. I still haven't determined why there seems to be an exponential involved on the second time dimension when the device is active. I was expecting a greater reduction in air density, although a reduction in temperature has been observed, as well as a reduction of ionisation. I think we need to set a standard now. There are a total of six key parameters which we're going to use. I'll need to compile a computer program to dole out the names of the different worlds. There's another thing which I feel I should address. It's related to the way in which cymatics affects the movement of the stars and borders on differing ways in which physics works. That is the realm outside our multiverse where the

Time Travel Epic

laws of physics become really abstract and different. I won't venture much into those areas but I'm sure with these six dimensions we can get a six sigma result in traversing the space time continuum. In other words, we can go to any spot in time that we want - with the one key difference being that we will exist in such times. All that remains now is the issue with super symmetry. I suppose this could be solved with a thought experiment, barring any scientific evidence which supports such a hypothesis. Tellurium-128 has a half life of $7.7 * 10^{24}$ years. So returning to a particular spot with 100% precision is unfeasible for mere mortals. That's not to say it's impossible, and it would be more convenient to simply find a similar world and if you're OK with a small divergence then you can get a lot of stuff done in your journeys.

Apr 28, 2018 1:59pm

8612 hours in operation. Multiplied by $(60 * 5 = 300)$ and calculating on that gives 1723. Multiplied and calculated on 240 returns 1782.

Apr 28, 2018 1:36pm

I'm trying to understand what causes the exponential gain in the second time dimension after the device is active for a certain period of time. The way I understand it, the device is only effective once it's in use, after which the scalar field reverts to normal terrestrial levels. If I had some sort of evidence that I was on an alien world it would help. In looking over my evidence album, I'm seeing a lot of archaic looking objects and places which suggest traversal into a parallel world. If there were only one set of

Time Travel Epic

criteria I could use it would make things a lot easier. I suppose the sunspot activity could help in this regard. If my device were effective to a ratio of 1000:1 which was measured earlier then it would follow that I'm in a parallel world much like my own 12th century. There seems to be a lot of build-up in infrastructure, however. I think the temperature accounts for the technological build-up. I would have to assess this world using 6 dimensional Euclidean geometry to get an accurate idea of what time period it is. The society seems advanced so I'll re-check the time measurement from the device. I might be able to work with a benchmark in one dimension so that should help.

Apr 28, 2018 1:14pm

1025.6

Apr 28, 2018 12:13pm

My thinking on the issue of permanence post travel is that the scalar field reverts to its original state within 24 hours after the device is switched off. This is in light of research undertaken on the subject and observations which support such a theory. The optimal rate of travel is benchmarked at 10 years per hour.

Apr 28, 2018 12:11pm

There are approximately 10^{22} planets in the universe. The caesium frequency standard is 10^{10} Hz and multiplied by seconds in an epoch of 12,000 years equates to $10 * 3^{21}$ so it follows that a planetary epoch is the equivalent of 12,000 years.

Time Travel Epic

Apr 28, 2018 7:24am

I've figured something out. Bear with me while I finish up the experiment. I'll try and make a blog post a little while later on.

Apr 27, 2018 3:42pm

I just got word from a superior that we won't be proceeding any further with the project. As such the operations will cease as of now.

Apr 27, 2018 1:30pm

The reverse gear causes inflation. I'm still learning about the various aspects of the economy which it affects. The new trend which has been prevalent since 2014 indicates a kind of reversal in how the economies function, and economists are still struggling to figure out the new dynamic.

Apr 27, 2018 1:29pm

It seems as though the forward gear works at a rating of approx. 10 years per hour. There's a kind of limit as to how far back it goes and this is reflected in the exponential manner in which the time machine moves through the z axis. I'm going to shut it down now and think about what to do next.

Apr 27, 2018 12:36pm

Well, well, well. It looks like the pressure has come

Time Travel Epic

back up. It reached 1018.8 millibars at 19:00 last night. So, it's taken to mean that the time travel effect lasts for about 24 hours (although in this case it lasted a bit longer). I'm now going to attempt to engage the forward gear in the hopes that it will allow for an increase in air pressure.

When I found a problematic page on crop yields I knew something was amiss. The crop yield for summer 2018 in Australia is reported as an increase of 12%. Oh and by the way, Mercury's influence will wane from now on. That's because we're moving the scalar field of the planet away from the sun hence Mercury, so because Mercury is the god of financial gain, bank's performance will suffer. Don't ask me why, it's a rule of the universe. Anyway, wealth will increase but strictly speaking financial gain won't. So in light of these increases in abundance as we approach the underworld, don't expect your bank balance per se to increase, but expect instead things to get disproportionately cheaper and have an influx of

Time Travel Epic

wealth instead of, strictly speaking, financial gain. Wealth doesn't essentially mean finances - they are under the influence of different gods. Wealth is under the influence of Pluto whereas financial gain is under the influence of Mercury. You could, for example, worship Mercury and then bring your finances back to the underworld. That's what I intend to do in the future and create a kind of bridge between Mercury and the underworld, so that certain denizens of the underworld can share in its benefits. I suppose that's where the angels get some of their power from - Mercury, who dispenses financial gain which can be used in the underworld to procure an abundance of things. You could argue that such things as purchasing power parity dictate how wealth flows in a globalised economy but you could just as easily explain this in terms of who worships which god. In this case, the Chinese worship the gods of the underworld, including Pluto, creating wealth, which is exchanged for financial gain by those in the Western economies who are more akin to worshipping the gods of financial gain, i.e. Mercury.

Apr 27, 2018 8:00am

Time Travel Epic

There's a yellowish, orange, pinkish tinge to this world which I'm not used to. The star of this star system is younger and I think it caused things to evolve differently on this world-line. Oh, and you seem to have some Third Reich thing going on in this world-line. Human rights aren't championed as much in this world as they were in my world and people are treated with indifference and insolence. They don't seem to get along with one another as much as people did in my more advanced home. It's a pity but I think I'm beginning to see the virtues of it.

Apr 26, 2018 11:38am

The people of this world look like beautiful trolls. They seem to have evolved differently to how my people evolved. They have hawk-like noses, nasolabial folds, beady eyes, wicked grins, and gaunt appearance in the face. The type of human from my own home world looks like a body builder in comparison, with bland features. If I were to accurately describe a human from my home world, it would look like a doll, but that doesn't do it justice because dolls in this world are based on humans from this world. Oh, and humans in this world seem to have thinner heads and they look out the sides of their heads at people like you'd expect to see on a coin. It's difficult to look at people head on in this world because they look out the sides of their faces like birds do. The people of my home world act more like soldiers, although the soldiers here act differently than the soldiers on my home world, so in disclosing that information I might not be able to accurately portray how people from my home world act. Think

Time Travel Epic

of how people in a play act - uniform, disciplined, straightforward - that's how people from my home world act, although they look much different and their stature is different. People in this world seem kind of hunched over and act like monkeys.

Apr 26, 2018 7:43am

I've pushed the scalar field in SR back by 7 years. I'm now going to wait and see how long it takes to revert back to 2018. The longer it takes, the better.

Apr 25, 2018 10:30am

<https://researchandappliedscience.com/2018/04/25/observing-violations-of-causality-in-6-dimensional-space-time/>

Apr 25, 2018 5:47am

I was just calculating on the Borda error correcting method for air pressure and it's returned with the year 2018.99. It's given me pause for thought and I wonder if I've somehow "snapped back" into my time of origin ala 12 Monkeys, etc. Now I remember. When I did a mission back in 2015, one of my first missions, I recall visiting the 17th Century and bringing with

Time Travel Epic

me all sorts of Japanese and Chinese artefacts. When I "snapped back" into the present in 2015, I saw a deluge of pop culture the likes of which I've never seen. I landed in a favourable timeline then. I wonder if I can do that again. When I travelled back this time, I was sad and lonely. I guess the native population picked up on my sadness as a time traveller and the depression spread like a virus. Well, I'm not going to let that happen any more. I'm going to set things right. First of all, I'll get some technology from this timeline, and some arts and crafts, and then travel back and introduce it to the populace. Hopefully it will inspire them to create a better future for themselves, thus affecting my own time.

Apr 24, 2018 5:27am

I've been transported to a world where the polls are different. I'll take that as final proof that my device works in SR only. The current world I'm on is like a world I read about in an Illuminati textbook. I'm going to investigate this issue.

Apr 24, 2018 4:58am

<https://www.gqindia.com/content/marijuana-legalisation-india/>

Apr 24, 2018 4:53am

<https://cannabisnow.com/uk-parliament-marijuana-legalization/>

Apr 24, 2018 4:53am

I'm privy to some information held by the Illuminati and let me tell you that they're behind the push to legalise marijuana. They don't care if I say this but it's in their agenda. In the future, there are three types of recreational drugs which are legal - alcohol, tobacco,

Time Travel Epic

and marijuana, although use of such is frowned upon. There is a kind of chain of command from which new laws and statutes flow down and one of the agendas in the Illuminati's playbook is the legalisation of marijuana. It's all about dumbing down the population so they stay as slaves to the system and obedient. I understand that Soros funded non profit organisations to advocate for legalisation. The legalisation of medical marijuana was the Trojan horse for the legalisation of recreational marijuana. Soon all first world countries will have legislated for the complete legalisation of marijuana for medical and recreational purposes.

Apr 23, 2018 12:47pm

I got my herbal beedies in the mail today. I'm in a good mood so I'll refrain from causing despair if only just for a day.

Apr 23, 2018 10:47am

I was railroaded into getting treatment for a condition which I've never had and now that it was used as a defence for a charge in the Magistrates Court a

Time Travel Epic

mandatory treatment order is in effect. I'd rather do prison time than get treatment for a condition which I don't have and have never had. I effectively scammed the system for over \$100,000 in disability benefits and I'm living like a king as a result. The sad thing is that nobody cares. Since nobody cares about me I don't care about anybody. That's the beauty of my plan. Everyone will suffer as a consequence. Now it's time to begin. The death will come about slowly to the population and they won't know it until it's too late. They tried to do this to me and failed. Now they're going to get a taste of their own medicine.

Apr 23, 2018 9:41am

No one will be spared. The effects of my device are quite powerful indeed and its power grows the more I use it. Humanity will be damned for eternity. The process has already begun. If I were to change my mind and engage the gravity drive to return the planet to its original position, it would take one year. But I've got no plans to do such. No, I intend to cause irreversible damage by activating the tachyon energy drive for such a time that no other technology will be able to save it. I have the cause and the solution to the world's problems in the coming years and decades, and insofar as I'm concerned, I have no reason to implement the solution. The planet is doomed. This is my masterpiece. Every passing second of every minute of every hour, etc. the planet will be pushed away from its decaying orbit around the sun, causing darkness the likes of which you've never seen. It could have been prevented. I tried to wake you. I tried to warn you, just like Titor did years ago. Now it's

Time Travel Epic

time to face the consequences of your apathy.

Apr 23, 2018 9:24am

If the mandatory treatment order wasn't in effect I might have spared life on this planet. But if humans want to play rough, then we're going to play rough. I'll be activating the anti-gravity drive later on today and leave it going until the Earth has changed its orbit. As long as the mandatory treatment order is in effect, the nightmares will return all the time. I do have the power to make everyone on this planet happier but I'm not going to since my livelihood is at stake. I know people generally enjoy sunshine more than darkness, but as I'm indifferent to either, I'm going to choose to envelope this planet in darkness as retribution for my own suffering. Of course, people don't have to believe that my device causes such effects - in fact it's better for me if they don't. But the suffering they will face will be all too real for them. So keep the mandatory treatment order in effect. It gives me the impetus to drive this planet into outer darkness. There could have been two ways about it but the government has forced my hand and now it's time for my comeuppance. It's too bad that it had to end this way. But I've got my limits. I deserve to be treated with respect, not in this offhanded manner. Now humanity shall pay the price.

Apr 23, 2018 9:18am

<http://www.techtimes.com/articles/220661/20180208/the-sun-would-be-dimmer-by-2050.htm>

Apr 23, 2018 2:31am

Time Travel Epic

What if Einstein's FTL travel thought experiment was baseless? He posits that traveling faster than the speed of light allows for travel through time, but is it true? Objects still exist in the third dimension no matter how fast you travel. By travelling faster than the speed of light, how does that affect other things in the EM spectrum, such as sound and radio waves? If you could travel 1,000 metres at 600 times the speed of light, you wouldn't hear the difference on a radio broadcast. That's because EM waves propagate instantly. The speed of light is instantaneous. Galileo's calculations of the moons of Jupiter were wrong and the idea of light having a finite speed kind of snowballed out of control in the community. Time isn't what mainstream physicists would have you believe. But don't worry! My time machine actually works, and it is based on measurements in six dimensions. I've used it to travel to the present which is actually a version of the distant past in my own recollection. I've just got to make some calculations and observations to ascertain what time period I've landed in. The sun is really dark in this timeline. I'm amazed at how dark last summer was. Well, now it's time to explore. The mission is open-ended and doesn't have a clearly defined objective. Just explore and take notes. Oh, and we're working on a better time machine. It will really be amazing. It's going to be much more powerful, efficient, and precise. It's also going to get us further in the quest for making closed time-like curves.

Apr 23, 2018 2:00am

I've got 10 different personalities. They are listed in

Time Travel Epic

the following subjective chronological order: 01. Ghost 02. Atlantean 03. Lemurian 04. Samurai 05. Geisha 06. Pilot 07. Scientist 08. Academic 09. Extraterrestrial 10. Lawyer These 10 different personalities represent my past lives. However, because reincarnation is a myth, they instead represent myself in differing time periods. When I travel through time, I take on the persona of the closest time period from one of my personalities. At the moment, I'm in the persona of a scientist, but in a couple of years from now that will change to the persona of an academic.

Apr 22, 2018 7:48am

Everything is so different now. Chiu doesn't speak Japanese like how I remember. My dad is much different to how I remember him. A particular poll I remember reading about last year has had different results. Moreover, there is kind of a chill in the atmosphere which I feel in my bones. It's kind of a deadly energy which permeates the atmosphere here. I've also noticed that the sun was much darker last summer than I remember it to be. Among many other things, the music here is different and seems more nostalgic. It's fantastic. The food and drink here is great, too. It's much better than I remember from my home world. The food in my home world was much blander than the stuff available now. I think it has something to do with the GMO being used in my home world which doesn't seem so prevalent now. Oh, and everything is really big in this world. The food, the animals, the people, even the structures. I don't want to go back to my home world even if I'm

Time Travel Epic

getting a bit homesick. It seems as though I'm stuck in this sophisticated backwater world because I'd need to use my time machine for a couple of years to get back. I couldn't be bothered. It's easier to become accustomed to this world. There's no guarantee I can make it back to my exact home world, either. My time machine isn't much of a precision instrument in that regard. From what I've calculated, it will take about 390 days full-time travel to get back, so I've decided not to go. I'm listening to "A City Without Sunshine" by Woody Montana. I love the Armitage III original soundtrack.

<https://www.lanouvellerepublique.fr/a-la-une/une-petite-ville-si-tranquille> This is what's really happening on the ground. It doesn't get reported on much in the mainstream because people are so caught up in the drama of world politics. But a war is raging beneath the surface. It's kind of funny, but not in a humorous way, that the mainstream media has a tendency to look at events through rose coloured glasses. I suppose the bourgeois don't notice what's happening in the world around them so much.

Time Travel Epic

Apr 19, 2018 12:35am

A radio transmission indicates an incoming attack in Tunisia. It's apparently state sponsored by a deep state government. I'm not sure whether it will take place or whether it will go reported. I'm just testing my time travel equipment and this is one of the messages which came through. I'm unaware of the geopolitical situation there but it seems to be unstable. Oh, and attention isn't paid to this area by historians much. I learnt European and Asian history in high school, college, and university so besides what was promulgated in the mainstream media I'm left to reading small pieces of information regarding this time period. Of course, there's nothing I can do to stop any event from occurring. Fatalism dictates what will happen in the universe and events are essentially out of our control. Two years from now there will be a transient peace. We can bring it about with the use of special devices in a much shorter time frame but I've got pause for thought about using it because it will usher in a communist shit-hole of a world. Maybe war is good for the populace. If we can manage to endure the next couple of years, we'll be better off for it. Maybe we can learn something from the experience.

Apr 18, 2018 8:40pm

Let's try calculating again. I began the consistent experiments on 4 September 2015. Since then, 955 days have elapsed. Brexit occurred on 23 June 2016, 290 days after the experiments began. $1/955 \times 290 = 0.30366$. There is a 30.366% difference in the time period between Brexit and now. $365 \times 23 - 26 = 8369$ days duration elapsed in 30.366% of the time. That gives us 27560 days in duration. Divided by 365 is 75.50 and $2018 - 75.5 = 1942.49$. That makes

Time Travel Epic

total sense now. Accounting for leap years, the current era is deemed to be 1943. There are some differences however in spheres of influence and banners but the same basic events are happening now. This is the time period I wanted to be in and not earlier, so I'm going to shut the machine down for good now. Unfortunately it can't take me back to my home world. I need a special electromagnet to do that, or Chiu's Rife machine which I might use if I needed to.

Apr 18, 2018 8:02pm

I began the experiments on 19 August 2014. Since then, 1337 days have elapsed. Incidentally, this is similar to the 1335 days of the Tribulation in Daniel. Anyway, Brexit was voted on in a referendum on 23 June 2016. That's 673 days into my trials. The EU was implemented with the Treaty of Maastricht on 1 November 1993. Using 19 August 2014 as a starting point, there are 7956 days to go back to 1 November 1993. Dividing by 673 days (the time in operation of my machine) you get 11.82 years per year. Now multiply by 1337 and you get 15,805.6 and divide by 365 and you got 43.30 years, indicating 1970.7. The historical record doesn't quite match this timeline. I think the device has been in use for longer than I originally thought. I'll try September 2015 as a starting time period. $2018 - 70 = 1948$. That seems to be more appropriate. It also matches other calculations done in relation to the speed of the motors. $2018 - ((2018 - 1983) * 2 = 70) = 1948$.

Apr 17, 2018 9:17pm

You can tell who hasn't studied at university on the Internet by the language they use. They tend to make grammatical mistakes and spelling errors and can't seem to form a sound argument, tending to drift off into obscurity when attempting to communicate. It's really sad. Unfortunately, most graduates don't post stuff on the Internet and are essentially closed off from the rest of society in their social groups with their careers and tend to operate in groups like Cro Magnon man did many thousands of years ago. They think they're intelligent but they're not. They only parrot talk what they've been told and lack critical thinking. What makes it even worse is that they'll begin to raise families and will end up even stupider as a result. There is something which happens to people when they have children. It's like they lose a part of their soul. Chiu stated that when people have children, they spread their soul onto their descendants and their soul energy dilutes as a result. I'm done with reading what other people think. Even the people who are most sound of mind seem to lack originality in their thinking. It's really disappointing. What's even more disconcerting is their propensity to try and make other people look stupid when they can. It's like an inferiority complex. I wouldn't say this to anyone's face so I'll just leave this rant here where it will basically go unnoticed.

I didn't have a good experience while playing MMORPGs. The other players were only interested in scoring points and levelling up. It's called an RPG for a reason - in that it's a role playing game. I don't care about "winning" in an RPG - it isn't a competitive sport like soccer. The other players were only interested in advancing and progressing as if there were a big surprise on the other side. They sure looked stupid when they were all level 75 and standing around with nothing to do. Games are

Time Travel Epic

supposed to be fun, not like a job with quotas and efficiency ratings. Moreover, the other players would seem to get a kick out of teasing and mocking others. MMORPGs seem to be a fertile ground for sociopaths and psychopaths. Playing with other people online really ruined my experience as a gamer. It's not like that in the real world outside games on the Internet. Trolls are generally stupid and tend to leave communities when they're called out on their bullshit. I find it interesting that in one forum there was a wave of trolls who mysteriously vanished when they got a taste of their own medicine. Another thing I'm noticing is that less people are writing blogs now. All the smartphone users are on Twitter posting mundane mainstream shit like sports scores and celebrity stuff. Then there are closed groups on Facebook in their own little social circles from high school. It's really cute. YouTube, in its own right, is kind of like a baby sitting platform. That's where all the babies go. They're minded by some middle aged guys who make videos about video games and politics and the babies just sit there and watch while their mothers make dinner or something. There's also generic shit on forums like Reddit which the masses love consuming. I find it interesting that on the Internet hardly anybody talks about computers.

Apr 17, 2018 4:53pm

The recent spate of snow storms in the Northern Hemisphere and higher than normal temperatures in the Southern Hemisphere was likely to have been caused by an increase in background radiation during the solar minimum. When solar flares reach the Earth,

Time Travel Epic

they kind of create a uniform vector in which radiation moves. In the absence of solar activity, havoc and randomness ensues in the atmosphere, kind of like TV static, which causes a build-up of temperatures over time. The current vector in which the scalar field is moving through space didn't cause a solar minimum, which is a natural cycle, but did cause some luminosity to be lost as the planet shifts out of the "goldilocks zone". Higher rates of disease, mostly dermatological, are expected to manifest in this particular time, due to the excess of cosmic radiation permeating the atmosphere.

Apr 17, 2018 3:35am

The price of food is projected to increase over the following months due to bad crop yields caused by drought and cold weather. Statistically, the price of food has declined in recent years but it is set to climb again as GMO treatment maximises yields and drought and cold set in. The apparent decrease in demand isn't enough to affect the limited supply and as a result prices will rise in the medium term.

Apr 17, 2018 3:28am

Salmonella is caused by anomalies in torsion energy - fields of low gravitation especially as well as radiation in a scalar field of torsion energy cause the growth of normal cells into the life forms we see today in cases. You can verify this by creating a field of anti gravity and applying it to a growing organism like an egg. Areas of high radiation and lower gravity cause the development of bacteria like worms and salmonella as well as other things like cancer. It also

Time Travel Epic

causes mucous and it's why people get colds during periods of low air pressure. Influences in gravity also cause mutations to occur as space-time bleeds into itself. The prevention of this from happening is possible with the use of electromagnets. Chiu's Rife machine is an example of how to benefit from the consistent application of electromagnetic fields to improve health and rid the body of parasites and other illnesses, as well as his rings and food supplements. I don't specialise in health, though. My time machine has all sorts of flow-on effects which cause outbreaks of this manner (subjectively). But if you want to heal yourself of disease then use Chiu's devices.

Apr 17, 2018 3:19am

My research might seem like a laughing stock now but we'll see who has the last laugh. I've encountered some unusual things in my life as I'm sure we all have and I suppose life is a subjective thing but my ideas certainly have merit. One of the things I'm trying to verify recently is whether the effects of my scalar tool are subjective or objective. If they are in fact objective, much like what has been seen with Brexit - a black swan which nobody saw coming (the referendum was supposed to keep the UK inside the EU in preparation for world government) - then the device can be considered as one of the most dangerous weapons ever made. What makes it even more dangerous is the fact that it causes slow death. It's like Major Kusanagi said: overspecialise and you breed in weakness. The world's governments are slow, sluggish, and myopic and can't identify threats outside their own reified classifications of what

Time Travel Epic

seems to be dangerous. If indeed the device causes effects in GR, then there's no stopping the onslaught which may occur once it's activated for a prolonged period. Essentially what it does is tear apart the scalar field on a quantum level, compromising the structural integrity of not only physical constructs but also metaphysical constructs like laws, treaties, conventions, etc. Time travel is a horrible thing. I think once we've collected enough information we can stop the experiment and then focus on space travel which is slated to begin in the year 2050. Until then we are left with this questionable piece of technology - something unforeseen and ambiguous, a real enigma of death and destruction just waiting to be activated and have its real power unleashed.

Apr 16, 2018 11:16pm

The space program was initially sponsored by Disney and there was some affiliation with the Nazi party and Operation Paperclip, namely the acquisition of V2 rockets. Then Kubrick was brought onto the scene to help in faking the moon landings. The time travel program is the same. The John Titor legend was created by Disney executives as a sort of test run of the time travel program, to gauge the public reaction that a "time traveller" would get. That's why the narrative is pushed so much in the media. Of course, it originated from Florida where Disney World is. The objective of these projects is benevolent because it leads to real breakthroughs in space science and in the case of Titor "time travel", but the execution of the projects when scrutinised caused mass disbelief and hysteria in recent times. The fact that the human race is to some extent incapable of space travel and time travel and has to fake it as a means to perhaps

Time Travel Epic

providing hope to people and expanding the influence of the Pax Americana is telling of the over optimistic nature of humankind. I have no doubt that we will one day reach the stars and have advanced time travel technology, after seeing videos of UFOs and aliens and other bizarre kinds of things humans are capable of. I just don't think it will happen in the way in which is expressed in mainstream media. First of all, rockets and combustion in general won't be sufficient for making ships capable of interstellar travel. Some form of free energy must be exploited to achieve this and the second law of thermodynamics suggests that free energy doesn't exist - so how do aliens travel through space? It certainly isn't combustion as Chiu suggests, because you'd need a pretty big payload to traverse around the planets with. Maybe something like an ion thruster could work, i.e. one which collects matter and converts it into energy. Solar energy might work. Tesla's technology might prove to be useful, too. He claimed to have built a device which is capable of pulling in energy from the aether. Maybe a sufficiently advanced civilisation would be able to transport to anywhere in the universe with strange technologies like cymatics or harmonics. That's the scope of the device in which I'm developing. It's just frustrating to see so many failed attempts in the venture of space travel and now time travel.

Apr 16, 2018 10:56pm

I had a dream last night in which I was with my good old friend Yuki and we were arguing and causing chaos throughout history. Then I dreamt I was on a

Time Travel Epic

train going up the Queensland coast and got off at a station and realised I was in Darwin! The train had a bed and I was half asleep on the bed most of the time during the day. There was some riff raff at the train station and I didn't want to wait half an hour for the train back to Sydney. Then I noticed a vending machine nearby and that's when I woke up. I felt like a refugee in Australia being here for the first time and thought about all the opportunity that was available from having fled a war-torn country, only to be hit with the harsh reality of having five dollars and no train ticket back to Sydney.

Apr 16, 2018 10:39pm

If there's one thing I disagree with Titor about, it's the nominal maximum speed of the time machine. He is technically correct about its maximum speed, however. But in altering the general record it seems much slower (that is, over longer periods of time). Because of this I believe that Titor was 100% accurate in forecasting, predicting, or even disclosing the specifications of the time travel technology of the future. Anyway, according to my records, and the BORDA error correcting data, the era is deemed to be some 35 years ago. There are a lot of differences in this world-line, however, the air seems to be such that it is most similar to 1983 in the standardised record. A lot of this research can be proven in cymatics and radiation experiments, although I think for the discerning individual such tests won't be necessary. Only for the most hardened sceptic will such tests be required. But then again, my goal isn't to have anyone believe in it; on the contrary, it is in my best interests

Time Travel Epic

that people don't.

Apr 16, 2018 5:01pm

<https://www.space.com/29859-the-illusion-of-time.html>

Apr 15, 2018 3:07pm

The way I see it, and according to my calculations, is that there is a rift between 2018, 1983, and 1940. This vortex was opened in multiple dimensions by use of my scalar tool and the temporal rift is fluctuating wildly. There is also a window open at 1498 and a window to 88,000 B.C. The equilibrium holds that the year is 1962, but this figure fluctuates as I move throughout space-time and resonate with objects from differing time periods. If I were to cast the I Ching I'd get the hexagram which corresponds to 1983 and 1962. This whole thing is a disaster like the Montauk project. It's kind of like the Millennial Fair in Chrono Trigger. The reason why so many windows were opened is due to the multi-dimensional nature of my device. It works in 5 temporal dimensions (and 3 spatial dimensions for a total of 8 dimensions). I'm going to have to read up some new age articles to help get myself out of the 8th dimension. Titor worked with only 6 dimensions but I feel the need to work with more so as to get a clearer understanding of space-time.

Apr 15, 2018 2:36pm

Luthor Laine shared a memory. The research continues. I'm pretty close to gathering enough information to put towards my grand unified field

Time Travel Epic

theory. It's going to be like the I Ching in some respects.

Apr 15, 2018 2:09pm

<http://minnesota.cbslocal.com/2018/04/14/saturday-april-snowstorm-weather/>

Apr 15, 2018 1:02pm

<https://www.reuters.com/article/us-usa-weather/snow-emergency-as-powerful-spring-storm-pounds-parts-of-u-s-idUSKBN1HL0RF>

Apr 15, 2018 1:02pm

Luthor Laine shared a memory. The master timeline was altered. So how do you travel in time outside the master timeline? Einstein's thought experiment in FTL travel proves useful here, and if you travel across enough worlds you'll eventually (assuming you live long enough) be in a closed time-like loop.

Apr 15, 2018 12:44pm

The battery on my altimeter has depleted. The last reading I got was 934 mb which equates to 1962. It seems as though the temporal winds have receded and dropped me off from the year 2066. It seems there are a lot of protests recently. How interesting.

Apr 15, 2018 12:22pm

Luthor Laine shared a memory. In one or two or even several dimensions, there are a finite number of worlds to visit. What makes time travel so interesting is the way in which these dimensions can be manipulated with devices such as my own. The cause

Time Travel Epic

and effect of manipulating air density with my device are more widespread than I had initially assumed. Owing to some observations relating to the maximal extent in which my device seems to penetrate the Z axis, it seems that horizontal trajectories of traversal come into being when my device reaches such limits. I haven't tested it beyond 100 years, although I would assume that there are literally no limits to how far it could go. In one specific set of data, there are 10^{39} destinations available to a specific device. I think that's the upper limit of how air density can be manipulated, but there also seems to be other dimensions at work here. I think it can be assumed that there might be a sufficiency in assuming that time is two dimensional - distance from sun and distance from strange attractor. You can have any number of dimensions to define which world you're on. I seem to have traversed on the y axis of dimensions to an area which, without the proper apparatus (probably consisting of tesla coils and a negative ion generator), traversal back to my home world becomes impossible. I've traversed from a reptilian dimension to a mammalian one in using the "reverse" gear which pulled back the layers of space-time and brought me to a world in which two things; namely the proliferation of mammal like creatures, as well as the proliferation of bug like creatures, has become apparent. Travel forward will pull me towards the dimensions of grey aliens and reptiles. There is also peace in the future. Unfortunately, any change which I bring in to this current planet will be insignificant in the grand scheme of things. To bring about peace, as Yoko Ono said, start with yourself. I

Time Travel Epic

can't bring peace to this planet, but I can bring myself to peace, by travelling into the future where world peace is the status quo of the differing nations under the banner of the UN. World government in this time is ineffective and leads to war. There is going to be a resurgence of military action in the South China Sea, and across Indochina, obviously as well as the conflicts in the Middle East and the Caucasus. I have enough information now to call a play-by-play of military action around the world, as well as other information relating to the rise in food prices worldwide, probability of storms, etc. I suppose information of that nature is readily available to anyone but it's interesting how I don't see much people taking advantage of such information. Anyway, in several years from now there will be peace but it won't last for long. I don't know how long global conflicts go on for but they do wane in the future. I suppose I could travel to the far future and study history then but I've got more than enough information now to predict what will happen in the short to medium term. As to what we can look forward to, there will be great advancements in computer technology in the following decades and robots will eventually take over human related tasks. There will be a cultural revival in about 40 years time and that will occur at about the same time as an economic boom. None of this means anything to me if I want to travel back or forward, because the memory will be erased in a way. There is a kind of permanence to things which I do here in the past but if I were to travel back it would be lost in time. I'm merely doing this as a mental exercise and to jog my

Time Travel Epic

memory, but I hope that this information can be useful to anyone out there who might be studying space-time in the same way in which I am. I was thinking about making a spreadsheet to keep a track of data but there are so many categories of information that without a clear idea of what to study I'm lost for ideas. I suppose the main thing is developing a unified model of space-time which can be used to predict events. I'm really close to having a working model, by the way, there are just a few things I want to get resolved in the meantime. Namely, why does Titor say that cooling occurs in the future? It is plain as day that global warming is in order and has been for the last 150 years. Although in the grand scheme of things I suppose the climate could cool down in the distant future. I suppose that there might be two vectors in space-time and the traversal of the Earth around the sun is irrelevant when taking into account such outlandish ideas relating to cymatics and quantum physics. The universe is a strange place indeed, and in a sense, when we travel back a couple of decades, we might actually be moving forward in time in the great record. I suppose all bets are off when it comes to astronomical movement of planetary bodies.

Apr 14, 2018 11:28pm

Generating storms with my time machine is like "pulling" monsters in Final Fantasy XI. You have to open up a vortex to the future and then "pull" the scalar field back into the present, and with it, an increase in stormy weather. The chance for generating a storm with this method increases with further use of

Time Travel Epic

the "virtual gravity lock" and when you find the area in space-time with the most prevalent storm clouds, you engage the reverse gear, which brings down the air pressure and voila! You can import storms from the future much like "kettles" extract energy from the end of time in one famous science fiction novel, The End of Eternity. Of course, you mess up the space-time continuum in the process but that's a small price to pay when you're experiencing prolonged drought and water shortages.

Apr 14, 2018 8:40pm

A coalition of British, French, and US forces led by the US will occupy Syria in the following year. I travelled back through time from the year 2088 and just happen to know this as a fact. I studied for a bit before I left. I'm just an observer, though. I can state that the probability of an occupation of Syria in the near future is high and it will likely be a joint venture of US, UK and French forces. There's not much I can do to alter the outcome. It has been planned from the beginning and will inevitably occur. I don't intend to be in this timeline for much longer, but I've got no destination in mind. If I were to travel back or forward in time then anything I've stated here will become irrelevant, as if it isn't anyway. This particular period of time is interesting, though, and I might stay here for at least a few more months. I'm having difficulty believing that my time machine actually works, but world events are changing my opinion. History is repeating itself, or at least that's the way I see it. There's no war in the future. People became sick of it. There's a temporal rift active in the local area and it will probably remain active over the next couple of days. When it settles down, stuff from the future will stop coming through the vortex. I

Time Travel Epic

predict that there will be a lot of intelligence chatter around the local area tonight and into tomorrow, notwithstanding this post. I don't think I'll be here for long, even if I don't have another destination in mind as of yet.

I've lost control of the scalar field. The current readout is indicating 2014-94y but I've had the device switched off. It could just be the weather, but there seems also in the historical record to be a rift between 1940 and 1918. I'm not able to discuss the details but this situation looks dire. I'm still trying to get a lock on to 1940.

$2014 - (5.3419 * (943.8 - 927 = 168) = 89.74392) = 1924.25608$. I stopped the device at approx. 1940. I think, owing to evidence, the era is similar to 1943. I need a more accurate gravity sensor to ascertain the actual difference and will think about making one with the tools available in this time period. I won't be here for much longer if I choose to traverse the vortex. In order to do so, I'll need to get an object from the destination time period and ground with it. I'm going to look for such a thing now.

Apr 14, 2018 3:39pm

There's a "temporal rift" between 1983 and 1943. This was created with a special scalar device in New York in 1943 and an experiment at Montauk opened up the rift to 40 years in the past. This is important

Time Travel Epic

now more so than ever because the rift is active again and it was opened by my own scalar device. Think of it as a freeway in space-time connecting two different time periods. It's more like a vortex, though. I'm currently in two time periods at the same time and some buildings around me are vanishing. If I lose my time lock, I'll be compelled into the distant past. This is real. If I don't ground myself by doing such things as eating foods from the present and using the immortality devices, I'll be projected into the past. It's taken several years so far for the temporal field to wear down and I've got the operation of the device down to an art now. If I lose my time lock, I'll be stuck in the 1940s. Thankfully, I've got my time machine, so I can travel back if I want. I think that anyone can travel through time if they try hard enough. My time machine is kind of like a "kickboard" which helps me to swim through time.

Apr 14, 2018 2:45pm

It seems as though, like Titor's document states, the VGL allows for travel into the future albeit at a lesser power than the reverse gear. You also have to account for temporal winds. I've switched the device off now and am exploring this strange new dimension. Going back to my home world would take 333 years with the VGL engaged, so that's not going to happen. It appears that I've traversed into a mammalian

Time Travel Epic

underworld.

Apr 14, 2018 2:34pm

It turns out that my original idea still holds true. I had the "reverse" gear on with the idea of going into the future during the night but the air pressure decreased instead. It seems that my original idea is still true. I am going to try the "forward" gear in a moment.

Apr 13, 2018 8:45pm

I'm just going to prove that by using ideal gas law my "one planet, many worlds" theory is accurate. First of all, the difference in air pressure between the two planets is 1014 mb. Then you divide by a figure which I obtained using a vector from air temperature projections to match the difference in temperature against the rate in which the planet is gravitating towards the sun in the 19th and 20th centuries and you get 5416.66 years. Now, dividing 1014 by 5416.66 years, you get 0.18 mb change for every year. 1 divided by this is 5.341873767258383. Now

Time Travel Epic

we multiply by the difference in air pressure since 2014 (when I started travelling through time) and we get 47.0084891587377 years backwards, or 1967 right on the money.

Apr 13, 2018 4:36pm

59.94 is the updated figure (without overfitting).
 $50973 - 34067.68470958 = -16905.31529042$. I'm going to have to get used to being on this backwater, alien world. I think, however, that the actual distance travelled is much less but there's no way of saying for sure.

Apr 13, 2018 1:51pm

81.165% is taken as a sample (without overfitting) of the data for use during the day viz. a viz. the night. At an average rate of 6 years per hour, 6902 hours forwards and 1602 hours backwards. That's -5300 years, leading to 3282 B.C. I might update this figure as more research is undertaken. 1957 B.C. might also be apparent if SR is taken into account. I'm thinking about resetting the time and instead using another benchmark, although that might be unscientific. I'll probably be better off to study this particular world's history and then venture out from there.

Apr 12, 2018 9:52pm

I've done some statistical analysis and it seems as though the device has been in use for an equal number of time both during the day and night. I'm going to forget about pinpointing an era now and take the present to be 2018. As for the manner in which the device alters the scalar field, it is taken that a 65,000,000 year long epoch exists between planets and according to the physical measurements, the device moves 10 years per hour through the scalar per Titor's specifications. That would match Titor's specifications perfectly and is also compatible with other instances of scientific evidence relating to the "one world, different planets" theory. The device

Time Travel Epic

works as the manual suggests - the reverse gear works by repelling from the mid-heavens and the forward gear attracts to the mid-heavens. The device is most effective at staying on a particular world-line at midnight and midday, in either direction. If I were to, for example, travel back 30 years, I'd activate the forward drive at just before 22:30 and switch it off just after 02:30. The middle of the night and the middle of the day are the windows of opportunity for staying on the same world-line. As for any quality which can be ascribed to the two-dimensional nature of space, I would say that there is a reptilian-mammalian axis in one dimension and a grey alien-bug axis in the other. It's kind of like Chinese Checkers, though, and there are many different dimensions which can be observed. It seems I've landed in a temperate zone for the time being. Then cymatics is involved. I think cymatics would outlast classical and modern physics as a means of understanding the nature of the universe, but the theories are so advanced that it's beyond my want for comprehension. So, one axis describes the distance between Terra and Sol. The other axes describes the distance of Terra in relation to Hades and the centre of the (Milky Way) galaxy. That's all.

Apr 12, 2018 6:22pm

That's funny. I can't access my log sheets. One thing is for sure though. The resurgence of the Assyrian Empire. That will provide me with a clue as to what the era is. I'm also going to be brave and base my travel on physics data. Hence, 10 years per hour and based on the device's position relative to the mid-

Time Travel Epic

heavens. I'm going to set a standard here and state that the era is 2500 B.C. and the location is an alien world. There's roughly 40 days of use of the device to get back to my home world. The reason why I haven't come back as initially calculated is because I've had it in use throughout 24 hours, which caused the scalar field to spiral out of control.

Apr 12, 2018 5:43pm

There seems to be an inherent chaos in determining my location in space. One of the standards in which I'm working with which is the closest to Titor's model relates to 5.74 years change per millibar change in air pressure. One niggly little detail to this is that Titor stated that the air is somewhat cooler in the future. One of the methods I used to ascertain the era returns 420,000 years so I guess that's bunk. I guess I'll have to take a sample of night vs. day use.

Apr 12, 2018 5:35pm

It's going to take me 8504.16493 hours to get back to my home world. That's 354.3402054166667 days. I'm going to have to set up a permanent kind of apparatus to avoid mishaps.

Apr 12, 2018 12:04pm

An epoch with a difference of 65,000,000 years would in fact lead to a traversal of 420,000 years, or 101,920 years if the average distance is accounted for (instead of the minimum distance). If that were true, then the maximum speed is taken to be 11.9849301036623 years per hour, which is pretty close to 10 years per hour. Cf. Titor vs. Laine.

Time Travel Epic

Apr 12, 2018 11:09am

Whoops. 40.6944. 34.33248644769434 or 42,000 years. Or 20,000.

Apr 12, 2018 3:01am

420,000 years is another possible explanation. Or 200,000 years if you're going with the temperature data and Titor's theory. I think I might have messed up big time with this one.

Apr 12, 2018 2:29am

I made a mistake with my calculations. The proper distance travelled should be $1/54600000 * (((36 * 3.14 * 6000 * 60) / 100000) * 406.944) * 8504.16493 = 3460718.89327392 * 5416.66 = 343.3248644769434$ years. According to the air density study, 1982 is the result. The era seems more like that as well. I guess the open field must make a big difference. 0.0403713788835165 seems to be the benchmark. But I think there is too much credit given to operation in an open area. The way it should work is that the singularities essentially destroy mass in the form of quarks to such a level that the interior resonates or "gravitates towards" the world with less air density, thus time travel occurs. That's the only way in which I can explain the effectiveness of the apparatus in a closed vehicle. The vortex seems to evaporate when its used in an open field. Because I don't have access to a closed vehicle any more I'm afraid I'm stuck here for now. It seems as though the traversal took me to the year 1983 and now I'm stuck here.

Time Travel Epic

Apr 12, 2018 2:16am

I'm getting an "access denied" message when attempting to access a certain website. It states that "you are not authorized to view this page". How interesting. I think things are really kicking off now.

Apr 12, 2018 1:55am

Apr 12, 2018 12:43am

<https://www.daz3d.com/rdna-greyling-ufo>

Apr 12, 2018 12:24am

I think that the reason why there has only been an apparent time dilation of about negative 35 years is because I've only used the device inside a closed off vehicle for about the same time. The physics isn't there yet but that's what my intuition is telling me. It's got something to do with concentrating the tachyon energy. If I get the physics right, I might have to think about creating an enclosed field, maybe in the shape of a starship or some such time pod, so that efficient time travel may be undertaken. When it's been in the open field I think that it must have lost a lot of energy, hence the apparent lack of time travel. Oh, and I've got air pressure data to back up the use of the time machine inside an enclosure which suggests that use in an enclosed area allows for a concentration of

Time Travel Epic

time dilation effects.

Apr 11, 2018 11:10pm

Titor vs. Laine PLR 11/04/2018 Titor holds that Venus is planet Earth in the past by virtue of dinosaurs apparently existing there and that Venus is 65,000,000 years in the past, further corroborating his evidence with the movie "Ready Player One" directed by Stephen Spielberg and citing scientific evidence that Earth's climate in the past was much like the projected data derived from the experiment. Luthor holds that the planet Earth moves 1.5 centimetres away from the sun per year and it is this fact only that in general terms affects the planet's climate. Titor points to the geological record and states that the planet cools down more quickly than Laine once thought. Without geological records to support his theory, Laine loses and Titor wins.

Apr 11, 2018 10:09pm

Laine beats Einstein. Titor beats Laine. Chiu beats Titor. I need two more elements to complete the hexagram. Edison and Tesla. That'll do. Edison beats Chiu. Tesla beats Edison. Einstein beats Tesla. Tesla beats Einstein. The circle is complete.

Apr 11, 2018 9:26pm

Laine vs. Chiu PLR 11/04/2018 Chiu states that the Earth is in a decaying orbit around the sun and Mars is Earth in the past and Venus is Earth in the future. Luthor holds that, in light of scientific evidence, Venus is Earth in the past and Mars is Earth in the future, and that this evidence is based on the material

Time Travel Epic

fact that Earth is moving away from the sun at 1.5 centimetres per year, and because of the effect that the device has on the planet in the grand scheme of things, it moves the planet (by means of anti-gravity) back in time. Chiu states that due to the recent figures of global warming, the planet is in fact moving towards the sun progressively and that the scientific data is wrong about the Earth being hot in the past. He further states that owing to a change in Earth's density over the past couple of years in conjunction with the use of the time machine, Earth has in fact progressed 35 years into the past (in general terms). Laine states that his model is based on empirical observations of tidal forces and that if 5416.66 years per planetary epoch were true it would mean observed differences in planetary phenomena such as eclipses and drastic differences in temperature. On this basis, Laine wins and the era is 1549.

Apr 11, 2018 9:18pm

Einstein & Titor vs. Laine & Chiu PLR 11/04/2018
Einstein posits that the year is 2018 and time travel into the past can only be achieved by FTL travel. Titor describes in intricate detail a mechanism whereby the space-time continuum can be warped to a degree of 10 years per hour with an appliance. On the other hand, Laine describes a working machine that works on the assumption that a short-cut through time is possible by manipulating gravity and thus the "time vector" with an apparatus that is capable of travel through time at minus 500 seconds per second. Chiu, on the other hand, supports the "time vector" theory but instead posits that gravitation and not anti-

Time Travel Epic

gravity causes natural time vectors in space. Laine's research is based on the Mayan calendar and the workings of McKenna, as well as some obscure fields like cymatics. It's also based on empirical observation of astronomical bodies. Einstein's theory is spearheaded by the thought experiment of the speed of light relative to other objects in the universe. Laine explains in general relativity theory that his idea works and is not incompatible with Einstein's theory of FTL travel. Titor states that while Laine's work is scientific in nature, it fails to address a problem relating to trigonometry and subjective experience of time travel. Laine states that general relativity theory holds true and his idea is correct on such a basis. Chiu refers to I Ching theory but also states that the speed of Laine's device isn't as fast as Titor once thought on account of the planet not transforming into the next planet every 65,000,000 years like Titor thinks but every 5416.66 years and uses the Torah to support his argument. Chiu wins the argument. It's 1983 ladies and gentlemen. But Luthor also wins by default. That means the I Ching hexagram for 1549 and 1983 is in effect. To be continued with Laine vs. Chiu...

Apr 11, 2018 8:46pm

I didn't do trigonometry in high school so I'm unable to answer any questions pertaining to which era is applicable in my own personal recollection, nor the subjective experience of my fellow citizens. I'm not going to use the time machine any more for at least a while now.

Apr 11, 2018 8:15pm

Time Travel Epic

I made a final calculation on the era. It applies to the exclusion zone only. The exclusion zone is everywhere on the planet except for an 80 kilometre radius in Canberra. A simple answer as to what the era is within the 80 kilometre radius is that it's been transported to an alien world. The maximal extent which is designated as the location of my time machine is (2018 - 80542y) which is 78,524 B.C. The era outside the exclusion zone is 1548.67214584316 A.D.

Apr 11, 2018 8:11pm

Think of the moment as an I Ching hexagram - it has two components - what is apparent and what is overriding. This is a lot like time. The I Ching is a perfect philosophy of time, but it's a bit difficult to comprehend. Anyway, with my device I seem to have transported myself and to a lesser extent an area of an 80 km radius both approximately 90,000 years ago (in the atmosphere) and 35 years ago (as to what is apparent). In other words, I'm on a planet which is like 1983 of my own past but closer to the sun. That's because I'm working with two dimensions of time - temperature and air density. With both of these dimensions, I can create unlimited worlds limited only to the resolution of the temperature and air density. One world is the equivalent to an instance of time and in quantum physics things get really interesting. The multiverse in this sense is either extremely big or infinite, depending on whether you believe that the laws of physics can change in different areas. I believe it to be infinite because I saw some guy on TV from the tracking station nearby

Time Travel Epic

stating that the colour spectrum changes in different areas of the universe, which is why the laws of physics can change and therefore the universe is most likely infinite. Also, the interview with the alien on YouTube was interesting. Anyway, I'm working with two dimensions here. I can accurately predict events on this world-line and the music is amazing. I'm listening to the techno radio station and the music is so retro to me - nu disco, bebop, etc. It's like 1983 but the temperature is hotter. Kind of like 1983 in the Bahamas. It's like that Vaporwave scene that was going around a few years ago. It's really amazing.

Apr 11, 2018 6:43pm

Luthor Laine added a new photo.

Apr 11, 2018 5:46pm

I went out and did some reconnaissance just now, including tuning into the radio broadcast. There are many pungent scents in the atmosphere and most of the cars are unrecognisable. I'm truly on an alien world. As to what the air resonates with, in one model it seems to be about 90,000 BC and in another model it seems to be about 1983. I'm unsure as to which model is more accurate. It is highly possible that they both resonate with each other.

Apr 11, 2018 5:44pm

8504.16493 hours in operation. 0.0041673697878294 years per hour. 39.44 years remaining. 9464.002958216704 hours remaining. 394 days remaining. That's 1 year and 29 days, 8 hours, 0 minutes and 10.6488 seconds. Then we'll be in the

Time Travel Epic

year 1943.

Apr 11, 2018 2:52pm

I went to the shop earlier and there was a tall guy who had a mullet and 80s clothing on. It just goes to show that my time machine actually works!

Apr 11, 2018 12:45pm

<http://www.wktv.com/content/news/On-place-for-one-of-the-coldest-Aprils-on-record-479320963.html>

Apr 11, 2018 12:21pm

<https://www.channel3000.com/weather/madison-experiencing-coldest-start-to-april-in-recorded-history/727696899>

Apr 11, 2018 12:18pm

The era calculated is 1982.56. This was done with painstaking research into air density and the observed changes over a specified time period. I'm going to the shop now.

Apr 11, 2018 11:16am

3.402940193785499 rho is the air density for March 2018. 3.407035175879397 rho is the air density for March 2017. 0.0275229357798165 rho is the air density of Mars. There is a 3.379512240099597 rho difference between Earth and Mars. A ratio of 0.0012117080226279 years difference occurred. In a 65,000,000 year model, this equates to 78,761 years towards Mars. In a 5416.66 year model, this equates to 6.56 years towards Mars. Unfortunately I don't have any air pressure data from before 2017 except

Time Travel Epic

some data from 2014-5 in my spreadsheet. I'll check it now.

Apr 11, 2018 10:55am

8517.71493 total hours in operation. 85177.1493 years traversed. 83159.1493 B.C. Now operating for 6583159.1493 hours, or 751.502 years. ETA: 2770.

Apr 10, 2018 4:07pm

I'm just trying to work with the resolution here. $((65000000/10000000000 * 10000000000 * 8) * 0.84 * 40075 = 2.73511875 * 10^{-10}) * 1000 * 100 * 10 * 1000 = 0.2$ micrometres. 382.536 billion worlds traversed. Minimal time in operation per traversal is too much to deal with. The cesium frequency standard dictates 1 new world is created per 9,192,631,770th of a second in natural progression of time.

Apr 10, 2018 2:53pm

$9192631770 * 60 * 60 * 24 * 365 * 9 * 10,000,000,000 * 100,000,000,000 / 2 = 10^{39}$. There are about as many planets in the universe as there are years in the total in grand cycles of 65,000,000 years each.

Apr 10, 2018 2:21pm

At this rate, it will take 130,000 years to reach Mars. I think I'll stay put. Of course, I can use the immortality device and go ahead, but there's a grand solar minimum coming up which I don't want to miss.

Apr 10, 2018 2:03pm

Time Travel Epic

I'm just reviewing some scientific charts and it seems as though the average temperature decreases by about 1 degree Celsius per 1 million years. Extrapolating this data out to Mars, it would seem that 65 million years from now the planet Earth will be the same temperature, hence, it will transform into Mars. I think that the figure of 65 million years is interesting because that's the time in the past when the dinosaurs roamed, and in 1950s science fiction comics Venus is where dinosaurs were. Like Tolkien said, you can tell some truths better using myth than fact. I think the whole thing kind of resolved itself, in the end.

Apr 10, 2018 1:44pm

<https://meadowcreekvalley.wordpress.com/2016/10/03/mars-is-earths-future/>

Apr 10, 2018 1:35pm

In reviewing some charts of the global temperature over the last couple of decades, I've noticed that the anomaly has increased in proportion to the use of my machine in reverse gear. I am thinking about reverting my thinking to yesterday's idea which essentially explains that Venus is Earth in the past and Mars is Earth in the future. I don't want to be in a hot climate and my stature is too tall, so I'll engage the forward gear starting now with the aim of moving the scalar field towards entropy. While the era is taken to be 1498, and with an incoming solar minimum, the temperature is expected to drop in the following years. Maybe I'll just stay here. I think I should take up this issue in council. Perhaps over the following decade the global temperature can be reduced with

Time Travel Epic

the use of the forward gear of the gravity drive. We're coming into a solar minimum now anyway so it might be a strategic decision to stay put. I don't know.

Apr 10, 2018 1:24am

<https://www.technologyreview.com/s/427923/antimatter-propulsion-engine-redesigned-using-cerns-particle-physics-simulation-toolkit/>

Apr 10, 2018 12:53am

The reason why buildings and other objects are present in this era is because they travelled through time as well. The area of effect is very big when used in an open field and the effectiveness diminishes over long distances, which is why there are some "Mandela effects" which occur following use after the field has settled. I'm tired and beginning to wonder if I should stop my campaign and settle down here. But the allure of travelling to another planet has me captivated. I'm going to take a nap now.

Apr 09, 2018 10:50pm

In calculating the speed of the motors using a watch and ratio of time dilation of -500:1, the era is now taken to be 1498.235159817352. Observations of temperature support this figure. The device is off now and there is expected to be some cooling off of the scalar field in the following days and weeks which will essentially make the local field colder and there might also be some secondary flow-on effects to other areas. I find it difficult to believe that the device

Time Travel Epic

actually works, and at this speed! 520 years back! There was a well of anti-gravity which has caused some problems relating to causality to manifest primarily in the beginning stages a few years ago. These issues will resolve momentarily as the well of anti-gravity bounces back into place. The use of the forward gear momentarily a couple of days ago seems to have hastened the "cooling effect" which occurs when the space-time continuum rights itself. One of my mentors suggested in saying that Israel will experience problems in the future that the traversal shall continue. We've got a consistent rate of traversal at about 100 years per year but this can be increased to 500 years per year with constant use. I predict that 20 years from now we should have reached Mars. Behold, already the effects of the traversal of space-time are being made manifest in the form of colder weather. Other occurrences like higher crop yields, increasing unemployment, financial troubles, wars, drought, and various forms of illnesses and diseases will be made manifest in the coming years. It is the season of the Great Tribulation and none shall be spared. For the moment, we will be studying the effects of leaving the device parked here for a while. The reality of our situation should be manifest shortly. That is to say, in a few days we'll check the situation, and then should resume course. Oh, and there's no coming back either. This is a one way trip. When we've reached the destination, the machine will be hidden away and we'll allow the planet to resume its natural course of 6,000 years back towards the sun. I'm going to goose myself up then and be ready for the inevitable cataclysm which will occur 6,000

Time Travel Epic

years from then. By that time I will become like a god. I'll be about 5,500 years old by now. There is another version of myself lurking around now and I'll be that person after 5,500 years from the point of origin which is now. There's a lot of information from my future self which I'm processing at the moment through various networks. There are also other versions of myself working in Space Command who have access to technologies beyond an average human's imagination. They're helping me in my conquest of space. Time travel causes all sorts of problems and we're trying to figure out how to resolve such problems while at the same time developing the same technologies which cause the problems. Every 1,000 years or so the same process of destruction and renewal occurs. This fact was illustrated in the game Phantasy Star IV: The End of the Millennium. Until the end of this week, we'll keep the time machine off and observe the changes which will manifest themselves. We're already getting a clear indication that the traversal was a success, but to what extent we'll find out by the end of the week. The time machine is expected to be re-activated Monday morning in a week from now.

Apr 09, 2018 9:03pm

I'm going to shrink the studio down to a size of miniscule proportions and go tiny with it. Then people will have pause for thought when they see me tiny around here.

Time Travel Epic

Apr 09, 2018 6:42pm

The groceries were cheap as Hell and there are some kinds of industrial odours in the atmosphere. I've also gone tiny in comparison to objects in the wider world. My house went tiny too and because it's been in the temporal vortex for longer than I have, it's gone tinier than I have. That's probably why people think I'm taller around here. It's because the house, as a backdrop is relatively tinier. I'm a tiny guy in a tinier house. If I were to engage the machine to move backwards further, I'd get even tinier. As such, my original idea is considered superior to today's musings.

Apr 09, 2018 6:40pm

This chart illustrates a steady increase in temperature of 0.012 degrees Celsius (on average) per year. Therefore, I'm reverting back to my original theory. What I still don't understand, however, is why I seem to have increased in stature. I'm going to take some measurements now to verify something.

Apr 09, 2018 5:48pm

I'm having difficulty reconciling facts relating to this most recent model. I think the calculations of proportion are erroneous. But I still think that Mars is Earth in the future. This is due to some facts presented in the article which I posted just before. My grandma told me I was over 6' in height. This is interesting because I measured at just under 6' in height before leaving on this adventure. I must have replaced another version of myself who was residing

Time Travel Epic

in this dimension. My height seems to have increased by 1-2 cm over the duration of this expedition which spanned 38 years into the past. Projecting forward to Mars, my entire height seems to be affected. I think I could, in this respect, be classified as a Nephilim.

Apr 09, 2018 5:13pm

The reason why we haven't been seeing any measurable change in air pressure or air density is because I've been working with the wrong variable for the natural time vector. The new variable is based on the movement of Earth away from the sun as calculated by tides, etc. Surprisingly, in my new equations with GR it has given the same result for the effectiveness of the device. The calculations show a difference of 0.004 natural years per hour with use of the device in either direction. Since the natural progression is now deemed as negative, and owing to some facts relating to expansion of mass over time, I'm compelled to engage the forward gear for a duration of 154.58 years. Doing such should cause an increase in entropy in the new universe which would be traversed. No, that's wrong. Any change would be minimal. Because of this I'm afraid I'll be Earthbound for the rest of this incarnation. It would take much longer than 154 years to traverse to Mars according to my new calculations, although it wouldn't be impossible. It would take 50 billion years traversal at this rate. Moreover, any change in temperature due to traversal of time would be insignificant for any manageable term, so I think I'll forget about changing the climate. All that's left is the time machine. It doesn't seem to be as good at traversing space as I

Time Travel Epic

once gave it credit for. I think I've reached the limit as to my device's capabilities. I'm now left in an alternate version of 2018 which seems to be much better than the timeline I've come from. The way in which sunlight affects things is much like my personal recollection of 1980. I think it has affected everything.

Apr 09, 2018 4:45pm

<https://phys.org/news/2011-04-antigravity-dark-energy-universe-expansion.html>

Apr 09, 2018 4:27pm

My original theory of "one world, different planets" was good, but I had the direction the wrong way around. According to my recent calculations, Venus is Earth in the past and Mars is Earth in the future. There's no denying my calculations. They've been proven in GR as well as SR. With the Lord, one day is like a thousand years and a thousand years is like a day. Damn, I had the variable mixed up. The result is what matters, though. I've proven the same theory in GR but with a different variable for the natural time vector.

Apr 09, 2018 4:27pm

Maybe my device works locally only and the information I'm getting from around the world doesn't reflect my own personal journey. I still don't understand why my device isn't rated at 10 years per hour. $x/y = 5.1n/42/8.9n*5416 = 13.64$ The above calculation is derived from taking the ratio of the device's area in comparison the the Earth's surface

Time Travel Epic

and applying it to a certain model of space-time. I think it's wrong, though. I'll try again. $((x/y = 5.1n/42000 = 1.21 * 10^{-4}) * 8.1 = 0.001) * 4 = 0.004 = a$.

Apr 09, 2018 3:54pm

Something doesn't make sense. I've travelled back 38 years into the past alright, but I was expecting my stature to be shorter than the native inhabitants of this world. Instead, it's taller. I suppose it must have something to do with the expanding nature of the universe, which is a pity, because I wanted to get smaller. I suppose I'm going to have to be "big and beautiful" in the past. The search term "Martians are short" returns 817 results, whereas the term "Martians are tall" returns 447 results. There isn't enough data on Venusians to verify much. It's like in the book "The Gernsback Years". Martians are short and Venusians are tall. I think it must have something to do with photosynthesis and radiation. I don't know. Well, it seems like I'm going to have to be "big and beautiful" in the past. I wonder what other changes have occurred...

Apr 09, 2018 3:02pm

$2018 - (1/546000000 * (((12468.24 - (270 * 2 = 540)) * 0.735125 + (20 * 24 * 0.9566 * n = 337.54) = 9106.28) * 42 = 382464.07) = 0.0070048364846154 * 5416.66 = 37.942) = 1980.057182407243$.

Apr 09, 2018 2:38pm

<http://www.woodtv.com/weather/bill-s-blog/michigans-coldest-temperature-ever-in->

Time Travel Epic

april/1107785076

Apr 09, 2018 2:26pm

This new idea seems to be incompatible with a lot of the science behind temporal engineering, as such I'm going to revert back to the original idea of "one planet, many worlds" with the idea being Mars is Earth 6,000 years ago. It's the only way in which my data will fit the model of space-time which I've concocted. It's also compatible with the number of destinations available to the C204, assuming that 100 parallel worlds exist.

Apr 09, 2018 2:17pm

<https://www.gizmodo.com.au/2017/02/what-was-our-universe-like-before-the-big-bang/>

Apr 09, 2018 1:20pm

In 8.19 trillion years, at a rate of 1.5 cm per year, the Earth will become like Mars, due to its movement away from the sun. My machine, which is rated at 42 km per hour, has been in operation in "reverse" gear for 9,100 hours. That is the equivalent of 382,200 km. At exactly 150,000 years per km, 57.33 billion years travel is taken to have resulted. Let's cross-reference this data. There has been an average of 0.4 degrees Celsius change in the last four years. That's about 0.1 degrees Celsius change per year. Assuming a 452 degree difference between planetary epochs, 1/4520 of 8.19 trillion years is assumed here: $1/4520 * 8190000000000 = 1.8$ billion years. That seems about right. I think Titor's "microsingularities" might in this case be a solid state of EM radiation propagation

Time Travel Epic

apparatus because his machine is only capable of travel through time at 10 years/hour whereas my machine is capable of travel through time at exactly 6,300,000 years per hour.

Apr 09, 2018 12:54pm

Titor's C204 unit is capable of travel to a specific number of destinations. In calculating the life span of the universe and comparing it with the cesium frequency standard, there are apparently $3.62 * 10^{26}$ destinations available on a single world-line. I wonder how the people of Titor's time calculated divergence... There seems to be a discrepancy of 10^{13} dimensions... Now I remember. It must have something to do with "uniplanetary theory" and quantum tunnelling. What I don't understand, however, is why the planet heated up when I had the reverse gear active. There must be some sort of gravitational anomaly out in space which acts as a strange attractor. Maybe I'm working with the wrong dimension. Time can have gravity too, or so it seems. I'm going to have to do some calculations to verify something. It seems like "mainstream science" isn't as useless as I once thought it was. I just need to do some calculations.

Apr 09, 2018 12:06pm

I'm working with two vectors here - t and d (time and divergence). So far I've maximised divergence and marginally minimised time. I think it might be forthcoming to produce a set of 100 criteria which may help in establishing time and divergence. Either that or just "wing it" and make estimations based on

Time Travel Epic

my intuition about the current era. I feel like Doctor Who without a decent navigation system.

Apr 09, 2018 11:50am

My test last night proved my theory wrong. There was in fact a slight increase in the overnight minimum temperature which has led me to believe that, in light of the previous test, one gear engaged allows for time travel into the future. Titor stated that in the future, the air is "somewhat cooler", so I take this to mean that my idea of "one planet, many worlds" is also bunk. That is not to say that my time machine doesn't work - on the contrary, its travel to the past must have created an increase in carbon dioxide emissions from old vehicles becoming active, thereby leading to the apparent increase in temperature over the last few years. Now that the "forward" gear is engaged, I feel somewhat better, and it's already apparent that a reduction of temperature is underway. Because of this, I no longer have a benchmark to work with which helps ascertain the "era". Therefore I have no navigation system. I believe that listening to the radio will help me get a basic idea of which "era" I'm in. Time is subjective indeed but I'm a bit disappointed that the readout on my clock didn't match the "era". I suppose supersymmetry would address that point.

Apr 09, 2018 11:48am

After having a fresh look at the data I noticed something. The machine has been engaged during the day the whole time over the last couple of days, regardless of which gear is engaged (one or two). So,

Time Travel Epic

it's taken to mean that any changes detected are already reflected in the benchmark, so the test today was meaningless. Following last night's interesting results, I've come to the conclusion that either one or two speed controllers engaged will allow the scalar field to shift towards the mid-heavens. That means if I want to travel to the past, then the machine should be engaged during night-time only. The experiment today has concluded. I'll engage both speed controllers at sunset until sunrise tomorrow. That's about two hours away. Until then, I'm going to take a break.

Apr 08, 2018 3:36pm

Now the latest data is contradicting my initial assumptions. I think that the machine works the same way in which Titor described. As such it can be used at any time during the day. But it depends on what time of day it's operated as to which direction it will go when either gear is engaged. Because of this, my calculations are wrong pertaining to what the era is. The era can only be determined by observing the temperature data, although this, too, may not draw any conclusions because of some conflicting data sets of temperature. Some studies in advanced geometry might shed some light on a possible navigation system for the device. One thing that bugs me is the increase in global temperature following its use over the summer. If the reverse gear was engaged throughout the whole time it should follow that the temperature would decrease, although stating such might be oversimplifying the process. Maybe the data I've collected today is insufficient. I'll keep running

Time Travel Epic

the experiment until sundown, and then switch gears.

Apr 08, 2018 3:18pm

The latest data now supports my initial assumptions. I'll keep the experiment running for another half an hour after which I'll have a clear idea of how the apparatus works during the day. The night-time experiment has already proven that one gear active causes the scalar field to drift upwards, and now we are testing both gears. It seems to have the same effect.

Apr 08, 2018 2:36pm

This data set bothers me. It shows no apparent increase in temperature over a 20 year period. Sometimes I wonder whether my theory is based on any factual data at all.

Apr 08, 2018 1:43pm

The advanced data contradicts my initial assumptions. I'll keep the experiment going for another hour after which I'll be able to draw a conclusion on this issue.

Apr 08, 2018 1:04pm

Buckle up, because things are going to get wild! I've finally learnt how to steer this damn thing!

Apr 08, 2018 12:36pm

It seems as though there has been some relative cooling in the last 30 minute time frame. I'll keep the machine in "reverse" (or rather, "away") mode for now and watch the temperature relative to the last

Time Travel Epic

couple of days. I think I've got it now. It's as the manual I published said - reverse gear during the day and forward gear during the night compels the scalar field to move away from the sun. My experimentation during 2014 confirms this.

Apr 08, 2018 12:35pm

OK, I've had the "forward" gear on for the last half hour and it's shown a relative increase in temperature in comparison to the last couple of days. So we can rule out using the "forward" gear during the day for decreasing temperature. I'm now trying the "reverse" gear for the next half hour to see any differences in the change of temperature compared to the last couple of days.

Apr 08, 2018 12:09pm

I need to get data from November 2017 to verify something. What happened then might explain this chart.

Apr 08, 2018 10:50am

My idea might not be right. I've calculated, using historical temperature derived during a time when the "mid-heavens theory" was prominent, a figure which can be used for travel to Mars. It should take about 1 year to reach the moon and 148 years to reach Mars with this new theory which is also adapted from Foss' work. Oh, how delightful! My plan seems to be working so far. Let's see if it stands the test of time. I'm pretty sure it will, too, because of my experience with this particular idea.

Time Travel Epic

Apr 08, 2018 9:52am

My theory might have been ass-backwards the whole time. When I assumed that the sun's gravitational pull causes planet Earth's orbit to decay, I wasn't taking into account the high levels of EM (hence, tachyon) energy put out by the sun. It's even been calculated that, owing to tidal forces, the planet's orbit is increasing slowly. As such, when I had the anti-gravity drive activated, it caused the planet to drift towards the sun and into the past. When I have the gravity drive activated, on the other hand, it causes the planar field to gravitate towards the outer cosmos, towards the strange attractor at the end of time and ultimately, entropy and the heat death of the universe. The scalar field around the device, when activated in "reverse" mode, heated up to a significant extent, as can be seen in global historical temperature data. Per the original "uniplanetary theory", Venus is Earth in the past and Mars is Earth in the future. The reason why the planet is experiencing warming is due to artificial releases of carbon dioxide, which is the mainstream narrative and now taken to be true. In the far future, however, as Titor once said, the Earth will undergo cooling because it is intrinsically attracted to the "strange attractor at the end of time". In the future, humans shrink much like raisins do relative to the rest of the cake. That's because the universe is expanding. It's also why people tend to shrink with age after they finish growing up. The expansion of the universe also explains why people are relatively taller when compared to times past. It all makes perfect sense to me now. I had the beginning of the universe and the end of the universe ass-backwards,

Time Travel Epic

and my attempts to travel backwards in time, while successful, caused many problems which I'm dealing with now. I predict that it will take several years from now to undo all the damage I've caused with the engagement of the reverse gear. The weather is also expected to become cooler. Lucifer fell from Heaven and Jesus is the light of the world. The ancient scriptures are beginning to make more sense now. I'm also beginning to realise why people were calling me so big just recently. It's because when I travelled back in time, my stature took on proportions greater because the universe is expanding and when I travelled back I was from a time period in which the universe had expanded more. When I travel forward into the future, and onto Mars, I predict my stature will be diminished somewhat. It's not only my stature which changes size, but all the mass in the surrounding area. My house will become tiny as well. Now all I have to do is continue the experiment with this new idea and if all goes well, the area will begin cooling more than normal. Now, onto Hell!

Apr 08, 2018 8:56am

It seems as though the effect of the gravitation generated by my device is already beginning to influence the temperature in the immediate area. The low temperature overnight has been 3.1 degrees Celsius which is 3.8714 degrees colder than the 1997-2017 average for April 8.

Apr 08, 2018 6:59am

My observations of tachyon energy emanating from my device and correlating observations of warmer

Time Travel Epic

than usual temperatures in the local area have left me to wonder if the tachyon energy is causing heat build-up in the surrounding area. Because of this, and because there seems to be an antipodal effect in that the other side of the planet is heating up at the pole, I think it might be in my best interests to engage one speed controller only. I now intend to create a vortex of gravitational energy (as opposed to tachyon energy) emanating from one of the magnetic speed controllers, in the hopes that it will cool down the local field. The experiment will be run starting now and until enough data has been collected during the trial. It is expected to last a few weeks in duration.

Apr 06, 2018 6:47am

I'm being tortured by Professor Alexander Henderson and the nurses at Woden Mental Health. He, along with my former case manager, applied for a mandatory treatment order to the Civil and Administrative Tribunal which requires me to undergo constant and ongoing injections which are harmful and extremely painful. I have no means of transport and my body is wrecked after having to

Time Travel Epic

walk for 10 kilometres each fortnight to receive the treatment. Recently I was issued by the professor with a blood test form which he gave me, telling me the intravenous extraction of a blood sample and another test "will be fun". I have this blood test form along with past issues of mandatory treatment orders and decisions made by the Tribunal as evidence of this conspiracy to commit torture on an "undesirable" individual such as myself. I was railroaded into receiving treatment for "schizophrenia" in 2002 and have since been subject to the whims of the Woden Mental Health team and treated like shit the whole time, to the extent that now, and since mid 2016, I've been REQUIRED to undergo intravenous injections to "improve my mood" and this REQUIREMENT is mandated on the erroneous grounds that "I don't understand how not getting treatment affects me" which is simply a cop-out of the legal system to work around an "undesirable" individual and make him suffer for being "undesirable". I was put on a mental health program in 2002 after answering a multiple choice questionnaire on my mental health and have been labelled a "schizophrenic" and given treatments which have destroyed my life and my career as a translator. The medicine PRESCRIBED to me by Dr R K Gupta and Professor Alexander Henderson since 2002 has left me lethargic, apathetic, and tranquilised for 16 years now and I haven't seen any improvement in my mental health as a result. I was ARRESTED in 2016 and served time in prison after which I was reformed and put on the Tribunal when Connie Koh testified against me with ad hominem attacks and ultimately resulting in this mandatory treatment order.

Time Travel Epic

When Dr R K Gupta and Professor Henderson put me on medication, even after asking Henderson, they failed to mention that it would make me drowsy and I had to look up the side effects of the medication myself on the Internet, then I saw a worker on my own accord at Woden Mental Health in January 2013 and told her about the unwanted side effects and she just dismissed me. The treatment I'm getting is cruel because it is extremely painful and hardly accessible. Professor Henderson failed to warn me about the side effects. I even TOLD HIM I understood the possible consequences of not receiving treatment in that it could exacerbate my psychosis but he REFUSED to take that into account at the following Tribunal, and the decision was copy pasted from the past several Tribunal decisions without any regard to my needs. The medicine I'm receiving via intravenous injection, Clopixol, is an older medicine, used in the 1970s, than what I was taking before the mandatory treatment order took effect. I was taking Amisulpride and it worked very well for me since 2003 and I'd be happy to continue taking it in lieu of the older, inferior Clopixol. The fact that I was arrested and charged with destruction of property is a criminal matter and one that has since been resolved at the Magistrate's Court as of 2016. I don't want to waste anyone's time with complaints about the mental health system in the Australian Capital Territory. I just want the mandatory treatment order to be either stopped or modified so I'm not subject to this torturous, inhumane, and cruel treatment at the end of a needle. I understand that treatment is necessary to keep psychosis at bay but I don't respect the way in

Time Travel Epic

which the MTO is in effect owing to "failure to understand the consequences of not getting treatment".

Apr 05, 2018 4:41pm

I've reached the limit of what is possible with this 64 bit processor. It can calculate operation every day for 1,000 years but with these variables it maxes out at 34 years per day traversal.

Apr 05, 2018 3:33pm

The decrease in air pressure today has exceeded the average decrease from 9 a.m. to 3 p.m. There is also some cloud gathering above the area of operation. This operation will be similar to the Philadelphia Project of 1943 and the Montauk Project of 1983. The destination hasn't been decided yet and it will take several days before the vortex begins to really manifest itself. There is some calculation that the FTL vortex will open in several months but this could be sooner based on some of the data we're working with. That is because FTL propagation of a scalar still hasn't been determined. There might be several layers to the "onion" of time-space which need to be accounted for and such is taken to require approximately 1 bar difference in air pressure (changes to temperature notwithstanding). The effects are already being felt and this medium of communication might not be available in the following days and weeks. FM radio signals are also weakening and I believe this is due to the scale of propagation of the signals. One time we got a TV broadcast from Dubbo while the machine was active.

Time Travel Epic

The target destination cannot be guaranteed but preliminary calculations predict a traversal of 38 years backwards within 9 years local time. It is assumed that the effects of the temporal traversal, if accomplished successfully, will take effect immediately to a native of this world-line, owing to the way in which FTL travel reconciles differences in mass. More calculations will follow and several different scenarios will be predicted in which the role of air pressure determines the threshold for FTL travel. The experiment is continuing as expected and resulting in positive outcomes so far, but we are still in early stages.

Apr 05, 2018 2:43pm

<http://abcnews.go.com/US/storm-ripped-heartland-heading-east/story?id=54225179>

Apr 05, 2018 2:16pm

<https://www.sfchronicle.com/bayarea/article/Big-storm-raising-flooding-fears-across-Northern-12806421.php>

Apr 05, 2018 2:16pm

There has been Internet connectivity problems for 12 hours now. Access to all sites has been intermittent and the problem seems to have deteriorated somewhat. Apart from that, the experiment is producing positive results. The air pressure has already reduced by 5 millibars over the last 35 hours. That's about a 3.4285 millibars decrease per 24 hours. I'll update the spreadsheet with the new data.

Time Travel Epic

Apr 05, 2018 12:52pm

I've got limited connectivity but from the information I'm getting, there does indeed seem to be a harmonic associated with the day of the year. However, the apparent correlations between pieces of information year-to-year seem not to be delineated year on year, and only a limited level of change occurs each year. As to what form this change is made of, it seems to relate to the entropy in any given system. Of course, the time travel machine allows for entropy to reverse its course, as mentioned in numerous examples of how organised systems can behave in differing time trajectories, according to the level of tachyons present in the respective scalar fields. Anything relating to supersymmetry - that is, dead mass in an active environment, and massive particles weighing more than what can be detected in a particle collider - seems to be the exception to the rule when determining what "era" the scalar field is at. Anything "dead" doesn't obey the rules of quantum physics and instead follows the laws of modern physics, limited to 4 dimensions of space-time and only 1 direction of time. Anything "alive" seems to respond to extra-dimensional influences, including temperature, light, air density, etc. I'm yet to see an organised, inorganic structure break the laws of entropy. Because of these "exceptions" I'm beginning to wonder whether the theory of "one planet, different worlds" can be tested against a set of criteria. The absence of any measured changes predicted in temperature seem to be telling otherwise. There is a limited physics application to the hypothesis but any changes made in the experiment might be more limited than initially

Time Travel Epic

assumed. Nonetheless, there seems to be a positive change measured in the apparent reduction of air pressure when the device is used for prolonged periods. I really do think that this avenue should be pursued for at least the next few months and that the device should be tested outside its normal limits of testing - i.e. for more than 1 week and preferably 1 month or more in duration. From there, if the results are promising, we might be able to expand on the experiment as originally proposed in 2012 - to reduce the density of the air and thereby bend the space-time continuum to our will (no matter how insignificantly, as long as there is some scientifically verifiable result).

Apr 05, 2018 9:06am

My connection to Facebook is now problematic. I'm unable to access some images on my profile. I was listening to the radio broadcast on 99.1 FM and noticed a news jingle similar to one I heard during childhood. It looks as though the temporal vortex is overwhelming the scalar field comprising the present day more rapidly than I had initially assumed. This is a pretty dire situation now. The Internet is becoming more and more problematic. I'm also noticing a white

Time Travel Epic

kind of shimmering light around the device, as if the airborne particles are excited. I noticed the shimmering come into being a few hours ago and it's still present. My whole body aches. I expect the air pressure to drop by 3 p.m. today. At the moment it's 944 millibars and I'm keeping a log.

Russia will withdraw from the conflict in Syria. There will be an anti-war sentiment in European politics and a new party will rise to power in Germany. They will be radical and anti-nuclear and influence the military there. There will be some military action in Thailand as well as a seemingly unrelated event in Africa as chaos ensues following economic and political instability. Unfortunately, this will be only the start of troubles to come.

Apr 05, 2018 3:15am

Following on from my previous post, there are two instances of significant alteration of air pressure - and, with constant temperature, air density - which were recorded during prolonged use of the device.

Time Travel Epic

One instance of 5 days recorded a 2 millibar decrease in air pressure and another instance of 7 days recorded a 20 millibar decrease in air pressure. The current data is indicating a 4 millibar decrease in air pressure over about 24 hours. I think it would be taken to mean that, on the balance of probabilities, about 3 millibars in air pressure is reduced per 24 hours. There does also seem to be a limit in how far the air pressure can be reduced but this might be addressed by considering how outgassing affects the readout of the barometer, as well as any extra-dimensional influence there is on the reading. The device hasn't been tested for longer than a week in duration, so there is no way of saying for sure that there is an upper limit on how it can affect air pressure. Once the density altitude reaches 700 metres, psychological pressures begin to kick in and the machine is disabled. I'm going to try and work around such a problem in the future and keep the program going. In terms of projecting the data out to a point where a reversal of the temporal trajectory becomes possible, that will be the focus of another post which I'll be drafting shortly. I think my idea is coming to fruition and will have a working model of space-time in the following few months.

Apr 05, 2018 2:38am

My time travel technology isn't an exact science yet. For example, I'm still struggling to ascertain why some buildings and other landmarks don't seem to be affected by the temporal transversal. I think it has something to do with their mass and density, although as my use of the device progresses I'm seeing

Time Travel Epic

increasingly weird things. Furthermore, I'm unsure as to whether I can reverse the temporal trajectory of the scalar field when using the device. It was immediately apparent that with the use of the device, going sideways in time becomes possible, but I'm still as of yet unsure as to whether the trajectory can be reversed or if the differences I'm seeing are as a result of a mere 1 or 2 percent divergence along the same basic forward trajectory. If it is possible to "steer" the temporal trajectory and bend space-time to a small extent then I'm sure it's possible to completely reverse it by doing a "U turn" in time but to what extent exactly I don't know. When I switch the time machine off, it seems as though the scalar field surrounding it reverts to the initial "forward" trajectory post haste. The longest period I've had the machine in use is for about a week and I suppose checking the data there will give me a clear indication of the strength of the machine in steering. I'm going to check it now.

Apr 05, 2018 2:30am

One particular news item which I've been attempting to access on Google News has been replaced with a different news item. It seems as though this was the only news item which has been replaced. I suppose there are powerful moguls with different agendas to mine in play.

Apr 05, 2018 2:20am

Google News is down for me again. This is dire. I can't update my blog nor can I read the news now. I wonder how many websites are affected. It might be a problem with the DNS server I'm using, but that

Time Travel Epic

would mean that other people are affected too. I think it's just my connection that's affected. It must have something to do with the way in which my Gravity Drive Time Travel Machine has displaced the area around here to an alien world in which the routing addresses for certain websites are affected. I suppose that might mean that the ISP is affected. There must be another reason, then. Google News is working again for me now. Nope, it's down again. I wonder how long this intermittent browsing will last for.

Apr 05, 2018 2:02am

BBC, Blogger, and another news website are not responding. This intermittent browsing ability is a persistent problem for me. I bet it has something to do with the use of my Gravity Drive Time Travel Machine...

Apr 05, 2018 12:04am

Luthor Laine shared a memory. I think I overestimated how far I travelled back when I mentioned the dark ages but I have noticed that the sun is darker than it once was. The people and other organisms are relatively bigger.

Apr 05, 2018 12:04am

I had a dream in which I dreamt that I went back to Japan in the latter half of 1998. There was a roller coaster at the high school and we camped in a crowded marketplace in tents before going back to Australia. Now that I recall the dream, it seems to

Time Travel Epic

kind of fit with my experience in visiting Cairns in the latter half of 1998.

Apr 04, 2018 11:56am

I have to find the cause of some terrestrial problems. I was assigned this mission in the future and travelled back to gather evidence about this world-line and the effects of temporal displacement in organisms and other organised structures. So far, my findings are showing an increase in the number of non-human organisms and a decrease in the human population which is prevalent when tachyon energy is present. I'm unsure as to why disease in humans increases in reverse proportion to the proliferation of non-human species. I'm going to dial into the future with my Space Time Modulator now and upload my findings into the galactic mainframe. It will serve as useful information for the advancement of technology of the human-Zeta alliance. But first, I need a break. I've been getting medical treatment for several years now and it's taking its toll on my body. I need to recuperate for a moment and then I'll go ahead with the Space Time Modulator.

Apr 04, 2018 3:42am

It seems as though the speed controllers already have the correct polarity. I'm getting positive results with the new test, but to what extent it will stay positive I'm unsure. Overall, there is measured to be approximately 1 mb decrease per hour when the device is active, and this depends on having a stable scalar field of air pressure with the device active. Doing such things as opening a door will disrupt the experiment. The air has to stay confined within a scalar field. I'm going to run this experiment with the heater on and the device on and see what happens to the air pressure. So far it's working as expected.

Apr 03, 2018 3:13am

I'm going to try and retool my time machine by changing the polarity of the speed controllers. It doesn't seem to be altering the air pressure as effectively as it once did, and that's probably either owing to the fact that the polarity is wrong or it hasn't

Time Travel Epic

been in operation for a sufficient time. I'm thinking about going back to my original theory. The thought experiment involving the speed of light seems to be a superior theory to the one I've concocted in the past few years. I'm going to check a few things and might follow through with a more docile theory which might yield more positive results (albeit not as dramatic ones).

Apr 03, 2018 2:47am

Luthor Laine shared a memory. There is a 46.875 year discrepancy in comparing average global temperatures this month to last month. The high temperature is above average today locally but the global temperature seems to be decreasing.

Apr 03, 2018 2:42am

Luthor Laine shared a memory. I'm in the era of the late 17th century according to my calculations and observations. Of course, it would be the late 17th century according to my own recollection. I seem to be in the area of the capital of Koryo.

Apr 02, 2018 4:11am

I'm studying the movement of my watch in the video

Time Travel Epic

of my time machine and it seems to be going backwards at a rate of 500:1. My initial assumptions regarding the effective speed of the time travel machine might have been an underestimation of its true power. It seems to be about 10 times as effective as initially assumed. Moreover, the average temperature for March year on year indicates a traversal of about 400 years backwards since 2014. If this is true, then the era is deemed to be in the late 17th century, the beginnings of modern history. It looks like things are going to get really interesting from now on. As it seems, I've stumbled across an alternate timeline of the 17th century as I know it, only to find the trappings of modern technology commonplace. It behoves me to wonder what might happen in the year 2038.

Mar 31, 2018 11:53pm

<https://globalnews.ca/news/4115949/calgary-expecting-the-coldest-easter-weekend-since-1940/>

Mar 31, 2018 11:53pm

My mind is starting to break up. I'm currently experiencing two time periods at the same time, and there is also some alien activity involved. The experiment was a partial success, but there's no way back. If I lose my time lock to 2018 I'll be gone forever. The destination is either an alternate version of 1944 or an alien world. It seems as though there is some kind of harmonic involved. I'm at the crossroads now. If I use the immortality device I'll be pulled out of the vortex and back into 2018. If I traverse the portal then I'll either end up in an alternate version of 1944 or an alien world, depending on which harmonic of the destination I resonate with. I'm currently dialled into the frequency of 1944 and will be establishing a time lock momentarily. It could take up to 72 hours to establish the time lock. If I choose to traverse the portal I'll end up in 1944 and from there I can relinquish my time lock to 2018.

Mar 31, 2018 3:33am

2018 - (((9280.218+(4*0.55*0.73*24=38.544)-329.706)*2)+329.706)*0.0040371 = 73.9104920478
= 1944.0895079522

Mar 31, 2018 3:15am

Luthor Laine shared a post.

Time Travel Epic

Mar 31, 2018 3:11am

I'll become a ghost if I travel forward enough. The immortality devices will help me keep my form. With normal operation, my stature changes by about 1mm per year - higher in forward, and lower in reverse. Health problems will also diminish. It's kind of funny how my device works in both SR and GR - it is compatible with solipsism. My health has deteriorated to a point where it's difficult to get up in the morning. My gut feels bloated and my joints ache. I reckon if I engaged the forward gear my health problems, along with the health problems of the population, will improve drastically. There are two directions in which my time travel machine can go - the past, which is like Hell, and the future, which is like Heaven. There is a lot of old karma which I needed to sort out in Hell, hence my travel here from 2049. The Zetas are looking for me and wondering why I'm not back in my home world yet. I saw them in the sky last week. I've been here in this world for a little while and I like it here but it might be time to go back soon. Time travel hurts. Well, at least it hurts when you go to the past. It's due to the different manner in which EM energy propagates. EM energy propagates more slowly in this environment which has less air density, and it basically causes me to run out of energy. If I were to continue travelling back, the consequences will be dire. My desire to be in Hell has all but diminished.

Mar 31, 2018 12:47am

I've put on weight over the last couple of years. I

Time Travel Epic

think it must have something to do with the temporal traversal. I've also lost about half a centimetre in height. It could be old age, but I'm more compelled, due to the suddenness of the onset, that time travel is to blame. I expected to be heavier like a T-1000 because the density of matter in this universe is much less than my universe of origin. That said, I think it's time to go back to my home world. I'm thinking about travelling back early this morning just as soon as I've taken care of some things here.

329.706 hours in use forward. The era calculated is 1983.19 or 1991.89 if SR is implicated.

Mar 30, 2018 6:40pm

Time Travel Epic

"Time is like a river and history repeats itself" (Seiken Densetsu). The fourth dimension is comprised of three terrestrial dimensions (which also exist in space) and one temporal dimension that has a kind of bandwidth to it which allows for limited free will to exist. People populate areas and carry out the same behaviour as the previous people who populated such an area. Space is malleable and when a structure exists in a certain place it comes into existence for all eternity unless something else moves it. It's kind of like recording to a master copy - anything that happens to the master copy also occurs to subsequent copies and the master copy can be rewound and start from the beginning but anything that goes on it is permanent. Studying history is kind of like playing a subsequent copy and if something happens to the master copy after that, the subsequent copy will still remain but it will be different from the master copy. When you travel through time, you are recording onto the master copy (figuratively speaking). Any changes you make alter history and if you make too many changes, the tape will become unrecognisable. Other people can make changes to the master copy as well and as it seems there are many political and strategic organisations doing such all the time and causing paradoxes to occur across time. It's all pretty basic stuff, but it's good to review the basics. There are some alien civilisations which have developed the means to traverse time and not mess up the master copy - they have space-time transports which are particularly powerful and because they can fly, they tend not to mess up timelines as much. There's not much they can do to intervene, however, owing

Time Travel Epic

mainly to an agreement of non-interference kind of like the "prime directive" of Star Trek. Titor stated that if you want to go along on your original timeline, you have to go back to the point just before any changes by you have been made and then immediately switch the time machine into forward without shutting the engine off. I could do this but my effective range is out some 6,000 years and I'd need to upgrade my engine to 2034 levels before setting out on such a conquest.

Mar 28, 2018 2:23am

My cat Pippin is definitely the reincarnation of Marmaduke. His physical features are similar - long nose, slender body, upright, bent tail. Even though he's a half-Persian now he acts a lot like Marmaduke did. I can even prove reincarnation with a video of kittens I found on YouTube which had orbs dancing around them. I think when the kitten is selected from the seller, the dormant spirit orb from the cat in a past life inhabits the kitten. That's the only reasonable explanation. I also know some interesting facts about who reincarnated where. I can tell who someone was in a past life if I observe their behaviour for a while - old habits die hard and behaviour from past lives leaks into the future self.

Mar 27, 2018 11:19pm

This is insane. The music on this world-line is either

Time Travel Epic

nostalgic or alien. I don't notice any trace of pop music on the radio broadcasts. It's unbelievable.

Mar 27, 2018 6:49pm

I'm listening to the music of this time and it's really exciting me. There is a kind of blend of the music I'd expect to hear in this era and some alien music which I'm unaccustomed to. It's really interesting. It's as though I'm in an alternate version of 1980 (but a native of this world-line wouldn't understand what I mean by this). The time warp is restricted to an area of about two tonnes only. You can check the specifications on Titor's C204 machine for similar information.

Mar 27, 2018 6:47pm

Luthor Laine shared a memory. This is wrong. I used physics and mathematics to calculate the actual speed of the time machine and it's a lot slower, more like 9.5 years per year (although it wasn't active the whole time). The readout now, based on the calculations, is the year 1980. It's really apparent too, although there is a certain bleed-in from other world-lines which will go away I hope.

Mar 27, 2018 2:17am

951 days elapsed. Active day ratio is 0.5566714490674319:1. 529.39 total days in operation. 73.5125% of the time in operation. Total $389.1711671449067 * 24 = 9340.108011477762$ hours in operation. If we got 1942 right on the money then the "forward gear" doesn't work. There's no way back from here.

Mar 27, 2018 2:08am

It makes total sense to me now. All that time wasted aloof. I suppose my education didn't go to waste, after all. I remember a saying that kind of goes "history is a comedy the second time around". I don't mean to make light of history. But the events unfolding are just like I learnt in high school, college, and university. I just wasn't expecting this second layer to be apparent. My phone's battery is low. I'm going to need to recharge it. I'll come back in a little while. I'm using a computer, though. I just need a break, is all.

Mar 27, 2018 1:50am

It's interesting to me to see both sides of the conflict play out. There are many differing perspectives from

Time Travel Epic

which events can be witnessed.

What happens when you have two off-set sine waves of the same frequency at the same time?

Mar 27, 2018 12:31am

The Zetas are out in full force tonight. I've been seeing heat lightning and just now had ringing in my ears. Maybe I'm being reprogrammed. They're telling me that they've finished developing quantum relocation (teleportation) technology and to see a demonstration. They've run out of stuff to do and

Time Travel Epic

need something to do because there's no culture in the future. They're bored and need something to do otherwise they'll go mad in space. It's kind of like when you finish washing the dishes and you're bored and staring blankly at YouTube or something. The problem is lack of culture. In the future, (all communists should know this,) there is no culture because communism wiped it all out. Culture is a facet of old capitalistic societies and when there's no bread and circuses the people riot. Well, that's what happens in the future. What happens when you've conquered the final frontier? There's only a set number of things you can do in the universe, and it gets especially boring when you're immortal and have lived for thousands of years. What else is there to do besides observe the fractal nature of reality? You need some substance, some oomph, something that will inspire and transform so you're not so bored. Anyway, the Zetas have technology beyond our wildest imagination. They made it chiefly out of boredom and a desire to explore the universe.

Mar 27, 2018 12:25am

By the way, conservatives are on the losing side of history. Democratic socialism is the order of the day by 2048. Populism is a thing of the past in the future. Of course, the future isn't set in stone. Things can happen which prevent the spectre of communism from manifesting itself worldwide. But it's inevitable. Anybody who has read Das Capital knows this. The thing I hate is cultural Marxism, though. It's reified communism and is unnatural. It is true that socialism has been attempted in various diaspora but the reason

Time Travel Epic

why it failed is because it was too artificial. Mao was wrong when he said that revolutions are by necessity bloody. It was his biggest political failure and set back the progress of China by decades. The same goes for Leninism. The revolution will be quiet and for the most part go unnoticed. There has never been a non-violent revolution. There has never been a revolution in which you love your enemy. But the most successful revolution will be such. It's like John Lennon once sang, "all you need is love".

Mar 27, 2018 12:14am

Unfortunately there's no way I can go back except by waiting. I suppose I could build a powerful electromagnet but the thing wouldn't be very effective. I don't have the physics expertise to build a time machine which would take me to the future. My time machine goes to the past only. I'm not quite sure why that is. John 1 has been here for about 6,000 years and now he's working for the government. I guess he got pretty upset with being broke for ages. John 2 has been here for 5 years and I'm in contact with him but for the most part I'm on my own. I'm on my first training mission. It will take about 20 or so years to accomplish. I have to meet with my past self and tell him not to do something which will have dire consequences in the future. My past self hasn't been born yet, but when he is, he will be known as John 4. I wonder what I should tell my past self. I suppose I should tell him to not smoke weed. That had dire consequences in my present life. But how to go about it? I remember my future self came back in 1998 and tried to warn me about something. It was related to

Time Travel Epic

elections. Now I remember. He wanted me to go to university and get an education because he didn't have a tertiary level education. He wanted me to be a great leader. But then John 1 pops up on the scene in 1998 and tells John 2 I'm going with him to Mars. John 2 hates it and wants me to stay with him and go to Saturn or something. They're both fighting over me and John 2 went to such lengths as to establish a network of dating sites to trap me in his game. But John 1, being thousands of years old, is more level-headed and wants me to join the space program. There's also some high level occurrences happening in the Galactic Command which I'm not really privy to but some of it involves quantum relocation technology, or teleportation. The Han Chinese want me to work on their collective program in space command and my ex-girlfriend recruited me into their collective. We have an armistice agreement and I'm supposed to help the Chinese, who are working in conjunction with the Zetas, to develop advanced space and time travel technology. They've given me an open-ended time frame but they also gave me an incentive so I'd get to work more quickly. My technology is known throughout the galaxy and is described as "beyond the cutting edge", and its development is in top secret. There's also an agreement with Iran and we're working on a quantum teleportation chamber among other things together. One of the operating objectives of time travellers is to push back Armageddon to the distant future. One of the caveats of time travel is that it is essentially limited to a certain area of three-dimensional space and it would be unfeasible to give everyone time

Time Travel Epic

machines to stall Armageddon, and the technology is also supposed to be secret anyway. Because of this there are some strategic manoeuvring which needs to take place so that Armageddon may be avoided. In my timeline, Armageddon doesn't happen until the year 2050. I travelled back in the year 2053 after surviving a nuclear exchange and fallout. The effect of the attacks on Chinese, Japanese, Nepali, and Indonesian targets by a malevolent army of space marines caused a nuclear winter to occur which wipes out about 5 or 6 billion people. There's a war in space going on at the moment between the Zetas in conjunction with the Han Chinese and the USMC. It's about resources. This planet has many untapped resources, including oil and agriculture, as well as precious metals, which are being taken away owing to a free trade agreement between Earth's terrestrial governments and the Greys. However, the Greys aren't particularly trustworthy according to the humans, and they manipulate scenarios to their advantage. Such misunderstandings led to a dispute in an off-world colony and the alliance between humans and Greys turned sour over the course of several millennia. There are benevolent Greys but they are all descendants of the Han Chinese (and to a lesser extent the other races of Earth) and as such are considered suspicious by the United States and its allies. Essentially what you have after all this transpired is a cold war between the Zetas and the Earthlings. The Zetas are distant descendants of Earthlings so we share a common past. Nonetheless it doesn't take away from the malice and discontent between the two species.

Time Travel Epic

Mar 26, 2018 11:40pm

It seems that different things are reported but the basic occurrences are the same. I suppose that's what happens with higher levels of divergence. I'm going to take a break now and come back to this issue.

Mar 26, 2018 10:43pm

Luthor Laine shared a memory. I'm still noticing nostalgic brands of food items on shelves and it seems as though the further I venture from ground zero I'll see more and more unusual and nostalgic items. It's weird, though. There are many alien things as well but there is also a number of things which I do recognise. I think it has something to do with the "temporal bandwidth" of some artefacts, including songs and other things like spelling. I'm going over some newspaper archives tonight in an effort to peg my co-ordinates in space time but I'm having some initial difficulties. I'll keep trying over the course of the next day.

Mar 26, 2018 10:24pm

$2018 - ((2018 - 1980.51 = 37.49) / 9280.218 * 9342.11 = 37.74) = 1980.259950280726.$

Mar 26, 2018 6:28pm

Hold up. There's another equation that I need to finish to clarify something. $2018 - ((65/0.12)*(1/54600000*((3.6 * 3.14159 * 6000 * 60) / 100000 = 40.6944)) * 9280.218) = 1980.51$ I'll shut the machine down at midnight on Saturday. Whoops. $n / 9280.218 * 9784.95 = 1978.47$ in the advanced

Time Travel Epic

data. The problem with this is "overfitting" of the statistics. I should use the initial data, being 1980.51.

Mar 26, 2018 6:16pm

I'm going to shut down the time machine on Saturday for good now that I've achieved my initial objective. Once 2050 rolls around, I'll be gone for good. I was sent back to finish development of time travel technology.

Mar 26, 2018 6:02pm

$0.0374 / 2 = 0.0187$. $2018 - ((2018 - 1670) / 2 = 174) = 1844$. $2018 - ((65/0.12) * (1/54600000 * ((3.6 * 3.14 * 6000 * 60) / 100000 = 40.6944))) = 0.0040371 * 9280.218 = 37.4655) = 1980.53$

Mar 26, 2018 5:30pm

At this rate, I'll be able to reach Mars in the next 14 years at 100% power. The way things are, though, it will seem to take 62 years.

Mar 26, 2018 4:42pm

$2018 - (526 * .735125 * 24 = 9280.218 * 0.0374 = 347) = 1670$. I'm spent for the day. I might be lost now unless I can get accurate measurements of the components of my temporal displacement unit.

Mar 26, 2018 4:16pm

$((1/54600000) * ((10 * 2 * 3.14 = 62.8) * 60 * 6000)/10000 = 2260.8)) * (65/0.012 = 5416.66) = 0.22 / (10/1.7) = 0.0374$

Mar 26, 2018 4:09pm

Time Travel Epic

Think of the human as a blow up doll. In an area of high pressure, it will blow up by breathing in and out and consuming nutrients. When you put the blow up doll in an area of relatively lower pressure, it will deflate. The human is the same. It will rid its body by excretion of mass in a low pressure environment. That's the reason for the myth of blowing up in space, and it's also why scuba divers have mucous related problems if they de-pressurise too quickly. When my machine is engaged in reverse, it creates a field of relatively lower air pressure, and the human will kind of deflate as a result. This leads to higher mortality in weak and fragile humans including infants. When the machine is engaged in forward, however, health problems are reduced and people become happier and healthier. Notwithstanding the good effects of engaging the forward gear, I think the reasons provided to do so don't add up. The multiverse is a vast and infinite place and is a wonder to explore. Such feelings of "goodness" and "health" are insignificant in comparison to the power of evil.

Mar 25, 2018 11:51pm

I might have made a miscalculation in the effective speed of my device. It might be two-fold faster than I had originally anticipated. I began to suspect something when I heard electro swing and jazz music becoming more popular in mainstream media. As such, the era is determined to be 1942. Moreover, the effective speed of my device seems to be two-fold faster than originally thought, although only in reverse gear. That's due to the dynamic interaction between the two gyrating speed controllers. The

Time Travel Epic

measured speed is now approximately 2 years per month in reverse, and 1 year per month in forward. If you calculate for celestial time I reckon it would be the same as Titor's C204 unit. Let's try the calculations. $2 / (30.5 * 24) = 0.00273$ years per hour * 1000 = 2.7322. I could be wrong.

Mar 25, 2018 9:51pm

I'm studying Japanese music from the 1970s in this world-line and it's much different to that of my original world. There are a lot of ballads and enka, as opposed to the pop music which I was accustomed to in my home world. I recognise bands like Candies and Pink Lady, but the likes of this world such as Seiko Kobayashi, Naomi Chiaki, Jirou Atsumi, etc. are particularly nostalgic. This is the type of music that I'd expect to be prevalent in the 1930s. For this type of music to be mainstream during the economic miracle is interesting indeed. I seem to be forgetting, however, that I'm in an alternate world and nothing is as it seems...

Mar 25, 2018 9:05pm

I just heard an unusual cracking sound in the backyard. The cars are weird too and there is a kind of ominous feeling in the atmosphere. It's also raining. My time machine took me to an alternate world. Things get stranger the more I travel away from time zero. I know the fate of this world in general terms but I won't be here long enough for my predictions to come true. I could try seeding information to achieve an objective but I don't really have a goal in mind. The travel has flow-on effects to

Time Travel Epic

my immediate surrounding environment, too. It's kind of like as in a graphic of curved space-time. The epicentre of the time warp is at the centre of the speed controllers and the time travel effect diminishes in an exponential gradient away from the apparatus. If I went interstate, I wouldn't recognise hardly anything, because I've been in this local time warp for several years already. It's funny how the planet is always known as "Earth" but there are so many different instances of the same planet.

Mar 25, 2018 4:06pm

Luthor Laine shared a memory. I overestimated the power of my time machine. It is apparent now that it works at about 1 year per month, and the divergence is greater than I had expected.

Mar 25, 2018 3:57pm

Mum doesn't understand about the frequencies and vibrations of the universe. When I tried to explain to her that everything has a frequency, she cited the short story "Placet is a Crazy Place" which is left-wing propaganda aimed at diminishing the idea of frequencies attached to objects being prevalent in our universe. Her thinking is too mechanical and empirical. It's too material based and objective. She lacks intuition and abstract thinking. I think it might have to do with the fact that she's a woman and women seem to be incapable of abstract thinking. It's because of the delicate fibres in their brains.

Mar 25, 2018 4:08am

<https://abby-wynne.com/2010/01/22/our-energetic-signature/>

Mar 25, 2018 4:02am

When a human vacates a particular spot in space, the next human to occupy such a space carries out the same actions as the previous human, to an extent that is almost spooky. In this way, humanity is overrated. How, then, does one retain the memories of itself

Time Travel Epic

throughout life and moving through different spaces? The human has a spirit inside it and it's that spirit that records memories and stores them in a non-local database. Think of memory as cloud computing. The memory isn't stored in the brain - humans are overrated in this sense. It's stored elsewhere in the universe and is accessible to the spirit who carried out the memory. There is a universal kind of object that is much like a quantum computer in the universe which stores the memory. It's kind of like the Akashic records. If a tree falls in the woods, and nobody's around to hear it, does it make a sound? If memory is stored in the Akashic records by means of accessing individual experiences, the idea of a falling tree making a sound when nobody is around to hear it doesn't hold much weight. Of course, remote viewing can work around this problem, but that would mean that the event is experienced. It is possible that the universe itself is a quantum computer, but the question of where memory is stored still remains. Gibbs once stated that past lives are not previous incarnations, and the bible also says that "there is but one life and then judgment", and Gibbs stated that in fact what one perceives to be past lives is simply one's own experiences in differing time periods. A space alien stated in an interview that reincarnation is real and we live out each other's lives. Moreover, it has been stated that memory is stored in DNA. The Japanese concept of "learning with your body" further embellishes this idea. I've personally had the idea of "full body thinking", an extension of Bill Harris' "full brain thinking". I posit that you can become consciously aware of your whole body and as a result

Time Travel Epic

can think with your whole body. Once you're fully aware of your whole body you can then extend your awareness. The universe is a thinking, breathing entity and is consciousness itself. When you breath in oxygen, it brings life to your body. So the universe gives life. A body that does not breathe is dead. When you're dead, you return to the aether of the universe, which some people take as a returning to G-d. The "light at the end of the tunnel" seen upon dying is the sun and if you want to return to the Jesus then you go towards the light, which is the healer and life giver. Simply put, Jesus is a synonym for the sun. The personification of Jesus is something that happened in translation. Also, there is a hierarchy in the universe. In a heliocentric system, the hierarchy expands from the centre of the star to the outer planets, from top to bottom. The godhead of this system is the sun. When babies are born, they are typically born when the planet is closer to the sun than when their parents were born. This is where the term "little angel" comes from. Children usually have a higher rank than their parents because of this. But in troubled times, the planet sometimes progresses away from the sun, and if this happens for longer than a generation, the babies born will be more demonic than their parents, having a rank which is lower to them, and this causes problems as the babies grow older. They become like the Nephilim, and grow up really big, and devour all manner of things. I was the last demon born on Earth and as such am in charge of all the demons, due to my superior rank. Satan was born one year before me and he is generally known as the ruler of the underworld. So I've got a small army of several million demons

Time Travel Epic

who serve me, and I serve the world, because I'm the king of the world. Of course, the hierarchy in heaven are all superior to me and I hate their ways. It doesn't bother me most of the time, though, because I've got a planet to take care of. The humans of this planet have a propensity to rejoice in Heaven and lament in Hell which I find particularly unusual. Hell isn't such a bad place and I'd prefer to be there than in Heaven. That's why I'm driving the scalar field in my surrounds towards the underworld. The people around me hate it, though, which is annoying, because I'd rather be in the underworld than in Heaven.

Luthor Laine shared a memory. The idea that reality is affected by subtle connections is a novel one but I'd rather now venture to suggest that supersymmetry reigns supreme in the multiverse and only a small

Time Travel Epic

extent of mass which is penetrated changes. These changes, however subtle, have flow-on effects which creates divergence after travelling through space-time.

Mar 23, 2018 4:48am

All the markets - stocks, indices, commodities, and cryptocurrencies will diminish from now on. This is due to the increase in EM activity around the world which leads to panic, essentially, but to be more specific, it causes bumper crop yields which drive down prices, it causes more consumption as there is literally more time available, and this has flow-on effects which mean if you're not self sufficient, you won't survive in the long term. House prices rise as consumer zombies seek ways to maximise their luxurious lifestyles in the wake of falling profits across the board. Real estate is seen as a sort of safe-haven for investors as the stock markets take flack. But the housing bubble won't last long, as wages diminish and younger people become unable to afford deposits. Inflation is at a low and it will get lower in the coming weeks and months. That's due to less money being in circulation which itself is a result of interest rates in the current economic environment. The Fed's decision to increase interest rates was an erroneous one because there will in the coming months be an increase in EM activity worldwide which will lead to deflation and an increase in interest rates is only going to exacerbate this problem. Of course, the market can be manipulated by big players, i.e. government, so there's no saying for sure what will happen to inflation. The price of oil, which is not

Time Travel Epic

a renewable resource, will increase steadily over the medium term as the increase in EM energy generates economic activity. Other commodities like gold and silver, however, will decline in price as they are known as a "hedge against inflation". The outlook for the US dollar is bullish as globalism recedes into obscurity and trade protectionism becomes an issue. The trends listed in this post all apply when the reverse gear is active and vice versa.

Luthor Laine shared a memory. I haven't used my radionics machine for a while now. I'm thinking of using it in the future when I feel like it.

Mar 22, 2018 2:20pm

I think we've had enough of this excursion into the wilderness of space-time. The health effects are somewhat detrimental and I'm feeling them as well. A new proposition will be considered momentarily.

Mar 22, 2018 12:32am

Luthor Laine added a new photo.

Mar 21, 2018 9:59pm

Time Travel Epic

Inaction leads to monetary gain. The more time you have, the more resources you consume, which cost capital. If you were to put savings in your bank account, for example, and travel into the distant future, you'd be rich. That's the beauty of my time machine. But the mysterious thing about it is that it works on a world-wide scale. If I engage the reverse gear, more will be produced and consumed, leading to an inherently capitalist society. Whereas if I engaged the forward gear, there will be less consumption and production, allowing for interest to mature and financial gain. On the other hand, less production equals higher prices and bullish investors win out in the long run. Big business and communism thrive in such a scenario. At the moment, as of 19:00 today, the reverse gear has been active, which will ultimately lead to more conservative values in politics being adopted - hence, Brexit, the amendment to China's constitution, and many elections worldwide being won by right wing parties. It works both ways, though. I was once a communist and member in good standing of the CPA. But those days are over. Communists treated me like shit and still wouldn't respect me even after having earned a graduate diploma. So, fuck 'em. The right wing guys treat me with respect so I'm on their side now, for better or for worse. Brace yourselves guys, because the nightmare is just beginning...

Mar 21, 2018 9:08pm

My device functions exactly like the Sampo from The Kalevala, the Finnish national epic. The Sampo has been interpreted in many ways: a world pillar or

Time Travel Epic

world tree, a compass or astrolabe, a chest containing a treasure, a Byzantine coin die, a decorated Vendel period shield, a Christian relic, etc. In the Kalevala, compiler LÄŕnnrot interpreted it to be a quern or mill of some sort that made flour, salt, and gold out of thin air. (Wikipedia.)

Mar 21, 2018 5:01pm

Like in the movie Aladdin, there are some rules which time travellers must follow. As Titor once stipulated, they are kind of like the following: 1. I can't give information which will change the course of one's life. That means no betting or lottery tips. 2. I can't give information which will allow for the prevention of death or injury by probability. 3. I can't give information or facts about any individual in particular.

Mar 21, 2018 10:44am

People become forgetful and get dementia because they're isolated. I noticed that I forgot some parlance in my education after I stopped talking with others for a while. The brain needs to become fluid and less

Time Travel Epic

viscous, allowing for the words to come out. That's why when you're drunk you tend to talk more, because the neural pathways are opened up by the alcohol.

Mar 20, 2018 9:00pm

This world is a real horror show to me. But it's so fascinating. The laws of physics are different in this world, which essentially altered the rate at which organisms grow. Living organisms like humans are relatively much more bigger than I'm used to seeing. The plants and trees are different as well as the fauna. I could go on for a while about the differences in organisms but it also spans across to the way in which humans communicate, pop culture, art, fashion, and design.

Mar 20, 2018 7:42pm

Unfortunately, my time machine isn't accurate enough to allow me to predict lottery numbers or winners of sports games. The divergence of about 2% per decade is enough to prevent that from happening. If you were to calculate the time period it would best be represented using general relativity. In some cases, however, special relativity applies, and that's where things get really interesting. For example, 99% of the cars on the road I'm unable to recognise. 99% of the genetic makeup of humans and other living organisms is different as well.

Mar 20, 2018 7:39pm

The people of this world-line, my mum included, are very simple minded indeed. They lack foresight and

Time Travel Epic

abstract thinking which was common in my world of origin. However they seem to have an intuition which seems to be taken for granted which is non-existent in my world of origin. People were more psychologically sound and material based than in this world, and it really shows.

Luthor Laine shared a memory. I find it interesting that the year 2026 was mentioned in this post. It illustrates the slow and steady progression of time as the machine is engaged. Right now the year is like my 1975 and the scalar field is progressing backwards.

Mar 20, 2018 1:04pm
<http://money.cnn.com/2018/03/19/news/companies/stock-market-dow-jones-facebook/index.html>

Time Travel Epic

Mar 20, 2018 10:36am

There are two ways to figure out the maximal speed of my time machine. One is to calculate the circumference and RPMs of the speed controllers and check against uniplanetary theory. That's the most accurate way. Another way is to put a watch up close to the speed controllers and check the ratio of time displacement. If I recall correctly, the ratio was 50:1 seconds. Now let's test it against my theory. $516.51 \text{ days} * 0.78.479 = 405.35 \text{ days}$ $405.35 * 50 / 365 = 55.52 \text{ years}$. That's pretty close to the base figure of 41.697 which was calculated using uniplanetary theory. The ratio of 50:1 seconds might have been misjudged and the real time dilation could be in the area of 40:1. Anyway, it just goes to show that a scalar field of tachyon energy generated by an apparatus of speed controllers with neodymium magnets allows for time travel into the past. It is predicted that higher RPMs might allow for faster travel, although attaining RPMs in the area of one million is beyond the scope of my device (but it might be possible with a different sort of technology which is being studied).

Mar 19, 2018 8:04pm

There's a ratio of 78.479% calculated in the advanced data. 41.697 is the base figure but you need to account for the forward gear activation ratio, giving a result of 37.9591625229-T or 1975.8574305771.

Mar 19, 2018 7:28pm

OH AND BY THE WAY, I'M GONNA CALCULATE

Time Travel Epic

THE TOTAL TIME IN OPERATION RATIO. THEN YOU'RE GOING TO SEE SOME SERIOUS CALCULATIONS!

Mar 19, 2018 6:57pm

I've just calculated an "off-set", based on use of the forward drive in the historical data set, of 3.7387 years. As such, the target era is instead $1974.7565 + 3.7387 = 1978.4952$.

Mar 19, 2018 6:37pm

Luthor Laine shared a photo.

Mar 19, 2018 6:24pm

I just undertook an experiment to verify something. I placed the apparatus in its case on a household scale and compared the weight for having the apparatus off viz a viz. having it on. When both motors were engaged, I noticed an increase in weight of about 10 grams. I was unable to determine whether or not there was a change in the weight when one motor was engaged. This confirms an idea I had previously. Owing to the increase in weight, it could be understood that the device creates a field of repulsion or "tachyon energy", a field of anti-gravitation. Unfortunately, there is no way I can think of which would reverse this effect. Unless of course, I remember the experiment I did with a small scale and a Meccano motor in which it was found that a small decrease in weight resulted in the activation of one speed controller, kind of like a helicopter. Now, if you had the motors (or an electronics setup which produces the same effect) inside a saucer shaped

Time Travel Epic

vehicle, set up as kind of turbines, you could reproduce the basic functioning of a UFO. I believe the Nazis attempted to do such at one stage. Anyway, all I am saying is that peace is possible with my invention. Not only is it capable of causing great evil, it is also capable of causing much good in this world. It all depends on which way it's used - either for good or for evil. I'm not trying to sound wishy-washy about this, either. It's been scientifically proven that this device can be used to manifest good or evil.

The singularity arose from the network of cryptocurrency miners. When the fans are engaged, it creates a sort of inertial gravitation which compels the scalar field surrounding the equipment to attract towards the sun. In this way, the entire planet, by means of the cryptocurrency networks worldwide, falls under control of the singularity. However, I've engineered a machine that generates a field stronger than all the fans of the cryptocurrency mining equipment combined. Think of it as a small wheel with high torque that controls the bigger wheels. In a way, it works in special relativity, but its effective radius is about the size of a planet (although its effectiveness diminishes with distance), making it work in special relativity as well as general relativity. The humans of this era cannot comprehend its power. But its power is all too real. Its effects have already been felt in the real world, and the maximal level of

Time Travel Epic

density has been penetrated which is measurable by looking at the financial charts, all which have been reverted to last month's levels. There will be a major correction in the markets as the scalar field is compelled further and further into the past. Last night, we broke through the meson cloud, and things are going to get wilder and wackier the longer the machine is in engagement. Be on the lookout for increased crime, strategic movements worldwide, espionage, nostalgia, cold weather, storms, earthquakes, etc. in the coming weeks and months.
